

HERITAGE STATEMENT FOR ST MARGARETS CHURCH HALL ANGMERING

The building and its environment

The church hall was built during the 1970's, the walls are built from a Fletton style brick in a stretcher bond, with flint panels with coursed flints laid at 45 degrees providing a herringbone pattern, all built with cement mortar. The roof of the building is a machine made clay tiles, with timber framed doors and windows.

The building is set within the north-west corner of the churchyard of St Margaret's Church a grade II* listed building.

The significance of the building

The building is of no significance, the external environment of the graveyard has a significance in which the building is set. The church hall does not positively contribute to the significance of the graveyard or the church.
