Dear Mr Smith,

**ERECTION OF 11 DWELLINGS WITH REAR PARKING COURT & ASSOCIATED
LANDSCAPING - GROUNDWATER MONITORING RESULTS STATION ROAD
ANGMERING**

Thank you for forwarding the "Second Interim Completion report " Ref: MAS-BH-313-1 dated 21 August for the above site. We have the following comments to make:

This latest report is very comprehensive and detail the findings of the latest monitoring pre and post piling works on site. It is unfortunate that quite a few of the groundwater monitoring wells were either destroyed or not found after the ground beams were installed on site.

In general, hydrocarbons levels post piling in groundwater have decreased though it is noted that the following the boreholes results still identified elevated results:

SLR301 - 26 mg/l Total TPH
PR1 - 44 mg/l total TPH (down from 63 mg/l in June 2008)
PR2 - 7.8 mg/l Total TPH (down from 8.4 in June 2009)
PR3 - 8.3 mg/l Total TPH (down from 16 mg/l in June 2008)

We would encourage continued monitoring of the existing boreholes and observation for any free phase product and removal if identified within the sumps PR1 - 3.

We agree with the conclusion and recommendations made in Section 11 and the 'Works to be Completed' in Section 12.

I trust that the above comments are satisfactory but if you require any further information please contact me.
