Dear Mrs Gardner,

Ref: Planning approval A/109/14/PL St Denys Nursery, Dappers Lane, Angmering.

Your e-mail to Mrs Liz Lawrence ref: A/16/15/doc

Further to our telephone conversation yesterday I enclose a plan of the planting that has been done to comply with the condition for screening along the field boundary indicated in the application.

The distance is approximately 80 metres and 400 saplings have been planted in a double row with 20 cm spacing. On the plan the area planted is shaded and where the numbers 1,2 and 3 are annotated more saplings have been planted to create a few clumps of hedging to replicate the boundary to Water Lane.

The saplings are 80 cm to 1metre in height and are a mix of deciduous native trees. 80% is an equal mix of hawthorn and blackthorn which grow to around 20 feet. The remaining 20% is a mix of Beech, Spindle, Field Maple, Guelder Rose and Hornbeam. These species grow to a greater height 30 - 40 feet.

The plants were sourced from Arundel Arboretum who recommended the mix although I had spoken to your office late last year to confirm that it was native deciduous trees that were required.

I hope this gives you the necessary information but do please call should you need any further information. I can be reached on [REDACTED]

Yours sincerely
