Dear Mr Leal

It has been looked into the national park situation further the boundary finishes at the pub on the opposite side of the A27 my post code should be BN16 4ET ~~not~~ BN16 4EU , the only reason for the 3 properties on the corner are using the BN16 4EU post code is because one of them won't agree to have it changed. If these are put into google it make it very clear it is wrong.

I feel this is a big issue as it changes the area and criteria it falls into of which the application will be assessed on.

Going through the diary for 2017 here is the following amount of movements from the site what is very minimal. we also only move at non peak times of the day as to not impact on other rd users.

Jan 0 moves	July 2 moves
Feb 0 moves	Aug 3 moves
March 0 moves	Sept 2 moves
April 0 moves	Oct 2 moves
May 2 moves	Nov 3 moves
June 4 moves	Dec 2 moves

On measuring the trailers on site and all possible towing vehicles they are all under the size off the 4x4 and caravan used for swept path analysis (12.99m)

Square blue dodgem trailer with draw bar included + Renault trafic van =11.89m
same as above + Ford transit van =12.69m

same as above + Mazda pick up =11.99m

Trailer with green cover tea cup ride with draw bar included

+Renault Trafic van =10.2m

Ford transit van with trailer =11m

Mazda pick up with trailer =10.3m

Blue A frame shape trailer (mobile stage) with draw bar included +

Renault trafic van =12.17m

+

Ford transit van =12.97m

+

Mazda pick up =12.27m

I hope this information helps I am more than happy for anyone to come and meet me and verify these measurements, proving the diagrams provided for the site are a true likeness of what is being used. I also confirm there is no tri axle trailers and has never been or will ever be in the future, this also clears up many false information that has been sent to you regarding vehicle lengths and movements.

Please see attached photos of the vehicles that verify the lengths above.

We are more than happy to maintain hedge and tree heights to always keep good visibility.

As you are aware we have a consultant for our site these are his contact details below and is more than happy to discuss further problems with you

David McMurtary

Motion 

Kind Regards

Mr Burrell
