Good morning Amber

Apologies for the delay on this, extension of time agreed.

Also, I am away for two weeks, returning the 17th August. I have copied in my colleague Simon who will be picking this up whilst I am away.

Please find attached the updated Littlehampton Drainage Statement. We have addressed the LLFA comments as follows:

- **Drainage design:** Engineering Layout included together with updated FEH22 hydraulic calculations using $C_v = 1.0$, including simulations for the 1, 30, 30+CC, 100 and 100+CC year events.
- **Drainage hierarchy:** Expanded justification for the proposed infiltration strategy, including consideration of rainwater harvesting and why infiltration remains the most appropriate solution.
- **Existing drainage/CCTV:** CCTV survey appended together with an engineering assessment of the retained drainage network. The review identifies where jet cleaning will be undertaken, confirms the retained drainage route is suitable for continued use, and explains why the isolated defect within the 450mm perforated soakaway distribution pipe is not considered to materially affect hydraulic performance.

Kind regards

Anna Cuthbert
