

Application No: A/76/20/PL

The results of the Archaeological Desk Based Assessment supplied with the application make it clear that the proposed development is unlikely to impact on anything highly significant. It concludes that its general potential to contain archaeological interest would justify an evaluation of the site following the granting of planning consent and secured by a suitable planning condition. I agree, and therefore recommend that a version of standard condition ARC1 be imposed, the aim being to identify significant archaeological deposits that might be present and to implement appropriate measures for their preservation.
