Design and Access Statement.

Wayside Cottage comprises two main parts. The original, which dates from anywhere between 15th and 17th century and a 1980's addition. It is the 1980's section we are wanting to insulate as although built with cavity walls it was never insulated at the time and is noticeably colder than the rest of the house.

I have requested the holes required for injection be of 22mm diameter and the mortar repairs matched as close as possible to the existing colour. I am sure you will agree that we should all be trying to reduce our carbon footprint and having increased the roof insulation to 250mm earlier this year, this is the next phase of reducing mine.
