

Toad Hall
Angmering
BN16 4JH

Biodiversity enhancement statement.

Toad Hall is situated on a private roadway in Angmering. It's located on the north side of East Drive and borders the golf course to the north. Although the property is suburban in character and has a modest garden there are various improvements that can be made to better support local biodiversity.

A small wildlife pond - can be as small as a butler sink partly let into the ground.

Wildlife friendly hedging – will introduce some new planting into the north boundary between Toad Hall and the golf course.

1.5 meters of grass will be left uncut at the north boundary

Install a bug hotel – logs/terracotta pipe etc.

Attach two or three bat boxes to the house and garden trees

Introduce planting with a longer blossoming cycle – eg - Winter heather, *Lonicera fragrantissima*, Hellebores. And early flowering crocus and snowdrops.

Although the size of the garden precludes any large scale action the above proposals will certainly provide a more diverse and sustainable natural environment particularly when taken in conjunction with the open spaces of the golf course to the North
