Proposed Site Plan

CATEGORY AND DEFINITION

	Trees unsuitable for retention
Category U	Those in such condition that they cannot realistically be retained as living trees in the current land use for longer than 10 years
	Trees to be considered for retention
Category A	Trees of high quality with an estimated remaining life expectancy of at least 40 years
Category B	Trees of moderate quality with an estimated remaining life expectancy of at least 20 years
Category C	Trees of low quality with an estimated remaining life expectancy of at least 10 years, or young trees with a stem diameter less than 100mm

NOTE

Hayden's Arboricultural Consultants were provided with a Topographical Survey but these do not always show the positions of all the trees/features on site. The locations of the additional features have been fixed using GPS. As such the position of the trees/landscape features should not be taken as exact but gives a fair distribution of their locations on site.
