Dear Christine,

Thank you for your time this morning and for showing me the Ginko biloba tree.

The tree is situated at your east boundary hard up against the perimeter fence which is situated adjacent to your eastern neighbours boundary wall which is itself proximate to their driveway.

The tree roots are causing vertical heave and outward force causing your ground to lift and your neighbours wall to bulge eastwards.

To prevent further damage to your ground and the neighbours wall and drive the tree requires removing by felling and then the remaining stump grinding and ground clearing to a level outlook.

I understand that permission will be required from the County/District tree officer and this should be sort urgently so that we may commence with the removal of the Ginko biloba tree as soon as is practically possible.

If you have any questions please do not hesitate to contact me.

Best regards ... Laurie
