

Project name	Salt Box, Bognor Regis		
Design note title	Phase 2 Units 4,5 and 8 Drainage Strategy		
Document reference	SAL-HYD-PH2-ZZ-RP-C-0020		
Author	D.Gallimore		
Revision	03		
Date	28 June 2021	Approved	✓

Introduction

This document has been prepared by Hydrock Consultants Limited on behalf of our Landlink Estates, to be submitted to be Arun District Council for discharge following conditions of planning FULL permission BE135/18.

BE135/18

"Hybrid application comprising a) Full planning application for erection of Class B8 warehouse with fuel island and car parking; 2 No Class B1/B8 employment units with associated parking and servicing; Class A1 retail food store with car parking and servicing; 2 No drive thru units with car parking and servicing; car showroom, workshops (including MOT testing) vehicle storage, external display areas, service areas and parking; together with access roads, associated ground and engineering works, landscaping and ancillary works; and b) Outline planning application for the development of employment units, parking and servicing areas, landscaping and associated works."

Condition 12: Development shall not commence, other than works of site survey and investigation, until full details of the proposed surface water drainage scheme substantially in accordance with "Salt Box, Bognor Regis: Foul & Surface Water Drainage Strategy (for Landlink Estates), 17th October 2019, prepared by Hydrock, (Doc. Ref: SAL-HYD-XX-ZZ-RP-C-0001)" and Drawing No. "SAL-HYD-00-ZZ-DR-C-7000 Rev. P03 – Site Drainage Strategy" have been submitted to and approved in writing by the Local Planning Authority. The design should follow the hierarchy of preference for different types of surface water drainage disposal systems as set out in Approved Document H of the Building Regulations, and the recommendations of the SuDS Manual produced by CIRIA. Winter groundwater monitoring to establish highest annual ground water levels and winter Percolation testing to BRE 365, or similar approved, will be required to support the design of any Infiltration drainage. No unit shall be occupied until the complete surface water drainage system serving the unit has been implemented in accordance with the agreed details and the details so agreed shall be maintained in good working order in perpetuity.

To ensure that the proposed development is satisfactorily drained in accordance with policies W SP1, W DM1, W DM2 and W DM3 of the Arun Local Plan. This is required to be a pre-commencement condition because it is necessary to implement the surface water drainage system prior to commencing any building works.

Condition 13: The development shall not proceed until details have been submitted to and approved in writing by the Local Planning Authority for any proposals: to discharge flows to watercourses; or for the culverting, diversion, infilling or obstruction of any watercourse on or adjacent to the site. Any discharge to a watercourse

must be at a rate no greater than the pre-development run-off values. No construction is permitted, which will restrict current and future land owners from undertaking their riparian maintenance responsibilities in respect to any watercourse or culvert on or adjacent to the site.

To ensure that the proposed development is satisfactorily drained in accordance with policies W DM1, W DM2 and W DM3 of the Arun Local Plan, and to ensure that the duties and responsibilities, as required under the Land Drainage Act 1991, and amended by the Flood and Water Management Act 2010, can be fulfilled without additional impediment following the development completion. It is considered necessary for this to be a pre-commencement condition to protect existing watercourses prior to the construction commencing.

Condition 14: *Development shall not commence until full details of the maintenance and management of the surface water drainage system is set out in a site-specific maintenance manual and submitted to, and approved in writing, by the Local Planning Authority. The manual is to include details of financial management and arrangements for the replacement of major components at the end of the manufacturer's recommended design life. Upon completed construction of the surface water drainage system, the owner or management company shall strictly adhere to and implement the recommendations contained within the manual.*

To ensure that the proposed development is satisfactorily drained in accordance with policies W DM1, W DM2 and W DM3 of the Arun Local Plan. It is considered necessary for this to be a pre-commencement condition to ensure that the future maintenance and funding arrangements for the surface water disposal scheme are agreed before construction commences.

Condition 16: *Prior to the commencement of construction works details of a proposed foul drainage system shall be submitted to and approved in writing by the Local Planning Authority, in consultation with Southern Water (including details of its siting, design, phasing and subsequent management / maintenance); and no Unit shall be occupied until works for the disposal of sewage have been fully implemented in accordance with the approved details.*

To ensure that the proposed development has a satisfactory means of disposing of foul sewerage in accordance with policies W DM1 and W DM3 of the Arun Local Plan. It is considered necessary for this to be a pre-commencement condition because the site drainage needs to be approved and implemented before any Unit is built and occupied.

1. REFERENCE DOCUMENTS

This technical design note should be read in conjunction with the following information:

Drawings:

- SAL-HYD-PH2-ZZ-DR-C-7010 Unit 4,5 and 8 Drainage Layout
- SAL-HYD-PH2-ZZ-DR-C-7011 Unit 1 and 9 Drainage Link Layout Sheet 1
- SAL-HYD-PH2-ZZ-DR-C-7012 Unit 1 and 9 Drainage Link Layout Sheet 2
- SAL-HYD-PH2-ZZ-DR-C-7100 Drainage Details Sheet 1
- SAL-HYD-PH2-ZZ-DR-C-7101 Drainage Details Sheet 2
- SAL-HYD-PH2-ZZ-DR-C-7102 Drainage Details Sheet 3
- SAL-HYD-PH2-ZZ-DR-C-7103 Drainage Details Sheet 4

2. SURFACE WATER DRAINAGE

2.1 Surface water run-off discharge destinations

The discharge of surface water run-off has been considered in accordance with the hierarchical approach:

- Infiltration
- Surface Water Body
- To dedicated surface water sewer (public, highways or otherwise)
- To a combined sewer
- To a foul sewer

Infiltration testing was carried out during both the Phase 2 Geo-Environmental Assessment and Supplementary Ground Investigation (both by EPS).

Due to the low permeability values recorded across the site, and the presence of high groundwater, infiltration to ground is not considered to be viable as the primary method of surface water disposal for this development.

Surface water run-off from the pre-developed site currently discharges into the ditch / watercourse on the western boundary during the more extreme storm events when the ground becomes saturated. Therefore, in order to mimic the existing situation, discharge to a surface water body is the preferred method of surface water disposal for the new development.

Note: Whilst infiltration to ground is not considered to be suitable as the primary method of surface water disposal from this phase of the development, it is anticipated that a small amount of infiltration could potentially be achieved when seasonal ground water levels are low or during smaller more frequent rain fall events which would reduce the impact of surface water run-off on the watercourse. The cellular attenuation tank and the porous paving sub-base located within Units 4,5 and 6 have been specified with a permeable membrane.

For the purpose of the calculations, no infiltration rate has been taken into consideration due to the variability of rates from seasonally high groundwater.

2.2 Catchment

The surface water drainage for the wider development has been split into 3 no. networks. The discharge of the condition relates to Surface Water Network 1 for Units 4,5 and 8.

Surface Water Network 1

- Units 4,5 and 8

Description:

Units 4,5 and 8 will connect into Surface Water Network 1 on the western side of each of their respective plots (Phase 1). A carrier drain will then take flows northwards within the estate road, across the top of Unit 2, before out falling into the existing watercourse on the western boundary of the development. Unit 2 surface water will connect into Surface Water Network 1 at a location upstream of the outfall.

- Unit 6
- Unit 7

Description:

Units 6-7 will not be constructed as part of these works. However, the surface water drainage system which serves all units within the Unit 4 to 8 catchment has been designed with an allowance for Units 6 and 7 without restriction. When Units 6 and 7 are constructed attenuation storage will need to be installed to the requirements noted on drawing SAL-HYD-PH2-ZZ-DR-C-7010.

Surface Water Network 3 (Link Only)

- Unit 1
- Unit 9

Description:

Surface Water Network 3 collects run-off from Unit 9 into a carrier drain which runs along the south of Unit 1 before out falling into the existing watercourse/ditch on the western boundary. Only the drainage link will be constructed as part of this phase of works.

The following table indicates the catchments for each surface water network based on the individual unit plots being 100% impermeable as noted above.

Network Ref:	Catchment (ha)
Surface Water Network 1	
Unit 4,5 and 8 (With allowance for 6 and 7)	1.24
Surface Water Network 3	
Unit 1 +9	3.75

Document Ref: **SAL-HYD-00-ZZ-SK-C-7702 Proposed Catchment Area** located in **Appendix A**.

2.3 Post-development run-off rates

In accordance with current guidance the peak runoff rate from the development for the 1 in 1-year rainfall event and the 1 in 100-year rainfall event should be restricted to a rate which is as close as reasonably practicable to the greenfield runoff rate from the development for the same rainfall event.

However, due to the increase in impermeable area it is expected that the volume of surface water run-off discharging from Unit 4-8 catchment will increase from the pre-developed situation. And as such, flows are to be restricted to a rate which does not adversely affect flood risk, this is considered to be QBAR.

The Kirk Saunders Flood Risk Assessment indicates that the Greenfield QBAR rate for this development is **2.90 ltr/sec/ha**.

Based on the QBAR rate for this development the following post-development flow rates for each catchment is noted in the following table.

Network Ref.	Post-development flow rate (l/s)
Phase 2 Surface Water Network	
Unit 4,5 and 8 (With allowance for 6 and 7)	3.01
Surface Water Network 3	
Unit 1 + 9	10.87

2.4 Surface Water Drainage Strategy

The surface water drainage for both Units 4,5 and 8 as well as the Unit 1 and 9 Link has been designed to ensure that:

- No flooding will occur during the 1 in 100-year rainfall event in any part of the building, or in any utility plant susceptible to water.
- Surface water for the 100-year rainfall event is contained within each catchment boundary.
- An allowance for **40%** climate change is applied to the 100-year rainfall event and incorporated into the surface water drainage design in accordance with local and national planning policy.

Document Ref: **MicroDrainage Surface Water Calculations** located in **Appendix B**.

2.5 Post-Development Exceedance routes

Should rainfall exceed the 1 in 100-year storm event or the system failure through lack of maintenance, surface water run-off is to be directed via designated exceedance routes away buildings and/or critical infrastructure.

Document Ref: **SAL-HYD-PH2-ZZ-SK-C-7700 Unit 4,5 and 8 Exceedance route** located in **Appendix C**

2.6 Water Quality

Due to the higher risk of pollution from Units 4,5 and 8 Class I Full Retention Interceptor have been specified and sized in accordance with Environment Agency Document PPG3 (withdrawn but still referenced).

Porous paving has been utilised within the Units 4,5 and 8 car park to provide treatment of surface water run-off.

Heavy Metals held within the suspended solids in the surface water run-off will be captured by silt traps, catchpits and gully pots which are to be checked and sediment removed as part of a site-specific maintenance regime and disposed of in accordance with current regulatory requirements.

3. FOUL WATER DRAINAGE

Foul water drainage from each unit plot will discharge into a new sewer located within the estate roads. Flows will be directed towards the north of the development where they will then be pumped from a new foul pumping station offsite via a rising main into the Southern Water Foul Sewer at Manhole ref 8801 to the north east in Shripney Road.

Details of the foul drainage system for Units 4,5 and 8 have been shown on drawings:

- SAL-HYD-PH2-ZZ-DR-C-7010 Unit 4,5 and 8 Drainage layout Sheet 1

3.1 Management / Maintenance

The foul drainage which serves Units 4,5 and 8 will be maintained by the owner / occupier where the drainage solely serves a defined unit. Drainage which is 'communal' and serves more than one unit will be maintained as part of the site wide facility management.

Document Ref: **SAL-HYD-PH2-ZZ-RP-C-0011 Phase 2 Drainage O&M**

Online Controls for Storm

Hydro-Brake® Optimum Manhole: S12, DS/PN: S1.011, Volume (m³): 3.4

Unit Reference	MD-SHE-0081-3000-1100-3000
Design Head (m)	1.100
Design Flow (l/s)	3.0
Flush-Flo™	Calculated
Objective	Minimise upstream storage
Application	Surface
Sump Available	Yes
Diameter (mm)	81
Invert Level (m)	1.075
Minimum Outlet Pipe Diameter (mm)	100
Suggested Manhole Diameter (mm)	1200

Control Points	Head (m)	Flow (l/s)
Design Point (Calculated)	1.100	3.0
Flush-Flo™	0.333	3.0
Kick-Flo®	0.682	2.4
Mean Flow over Head Range	-	2.6

The hydrological calculations have been based on the Head/Discharge relationship for the Hydro-Brake® Optimum as specified. Should another type of control device other than a Hydro-Brake Optimum® be utilised then these storage routing calculations will be invalidated

Depth (m)	Flow (l/s)	Depth (m)	Flow (l/s)	Depth (m)	Flow (l/s)	Depth (m)	Flow (l/s)

KEY PLAN

NOTES

1. All dimensions are to be checked on site before the commencement of works. Any discrepancies are to be reported to the Architect & Engineer for verification. Figured dimensions only are to be taken from this drawing.

2. The DWG file is issued for the purposes of coordination only and do not represent formal drawing issue and are not to be reprinted in any form. Formal issue of drawings is via DWF, Adobe PDF files and/or hard copies and their associated information issue sheets.

3. Note that all care has been taken with the export of DWG files and their content, but we recommend that you make due dimensional checks before using any DWG file information. Any errors found are to be reported to Hydrock immediately.

STORM SEWER DESIGN by the Modified Rational Method

Design Criteria for Storm

Pipe Sizes STANDARD Manhole Sizes STANDARD

FSR Rainfall Model - England and Wales

Return Period (years)	100	PIMP (%)	100
M5-60 (mm)	19.000	Add Flow / Climate Change (%)	0
Ratio R	0.350	Minimum Backdrop Height (m)	0.200
Maximum Rainfall (mm/hr)	50	Maximum Backdrop Height (m)	1.500
Maximum Time of Concentration (mins)	30	Min Design Depth for Optimisation (m)	1.200
Foul Sewage (l/s/ha)	0.000	Min Vel for Auto Design only (m/s)	1.00
Volumetric Runoff Coeff.	0.750	Min Slope for Optimisation (1:X)	500

Designed with Level Soffits

Time Area Diagram for Storm

Time (mins)	Area (ha)	Time (mins)	Area (ha)	Time (mins)	Area (ha)
0-4	1.690	4-8	1.729	8-12	0.327

Total Area Contributing (ha) = 3.746

Total Pipe Volume (m³) = 52.208

KEY PLAN

NOTES

1.

All dimensions are to be checked on site before the commencement of works. Any discrepancies are to be reported to the Architect & Engineer for verification. Figured dimensions only are to be taken from this drawing.

2.

The DWG file is issued for the purposes of coordination only and do not represent formal drawing issue and are not to be reprinted in any form. Formal issue of drawings is via DWF, Adobe PDF files and/or hard copies and their associated information issue sheets.

3.

Note that all care has been taken with the export of DWG files and their content, but we recommend that you make due dimensional checks before using any DWG file information. Any errors found are to be reported to Hydrock immediately.
