

The Memorial Stone Company.
Report on Surface water dispersal.

There are 2 small buildings constructed on eastern edge of the existing car park to the Memorial Stone display area at Shripney Road , Bognor Regis West Sussex.

The larger building is for the storage of Memorial Stones awaiting additional lettering and the small building is a Timber Shed. The Shed will have drip eaves and the rain water will discharge to the South onto the roots of the large hedge which forms the South Boundary of the site. The northern eaves will discharge onto the concrete surround of the storage building and then run to the car park.

The storage Building will have 2 x 75mm rain water pipes which will discharge into a new soakaway under the car parking area via a 100mm plastic drain.

The car Park is finished with gravel and gives a porous surface which allows the surface water to permeate into the ground.
