

Design and access statement

With the work carried out the cottage will look a lot better.

It will also be cheaper to heat the cottage, there for less CO₂ being used better for everyone.

With new doors and windows the cottage will be more secure with 5 lever locks.

Insulation of 50mm on the outside of the 1970 part and then cladded with Marley Creden weather board which you get in all sorts of colours. We have not picked a colour yet. Will make the house so much nicer to look at.

From the front of the house you see the newly repaired sash windows. And with the new front door in old cottage style composite with long narrow window in door. With the old plastics guttering taken down and replaced with deep fill cast iron look plastic.

I think this work will compliment the cottage.
