

Heritage statement

85% Of the work will be carried out at the back of the house where it can't be seen from public place.

Filler in windows don't make good heritage.

We want the cottage to be as old as it can but has to be a home not a building waiting to fall down.

We love the cottage from the first day we look at it. Putting on new front door and stop water leaking in. We would like to put door with lead window in but has to be warm.

At the back of the house the bit which is having most of the work was put around 1970 and built badly.

We would like it when you walk around the back to have a wow factor.
