Subject: Addendum to Application Form - BE/30/19/PL

Dear Mr Davis

With regard to the above amendment to the application form regarding the welding equipment.

As the generator has already been in operation on site many times (as informed to ADC) it is of a great concern to us and our neighbours in that acetylene and oxygen has more than likely already being used and stored on site.

We do hope that the applicant is aware that this a flammable material as noted on the HSE website 'Acetylene is an extremely flammable gas and can form an explosive atmosphere in the presence of air or oxygen'.

We do hope that the applicant has carried out the necessary risk assessments associated with the use and storage of such material and has made employees of the site aware of what they need to do in the case of an emergency.

However the applicant has FAILED to notify West Sussex Fire Brigade that flammable material is used and kept on site at Babsham Farm.

We know this as an evacuation notice, following a survey by West Sussex Fire Brigade, would have to be issued to those of us living in the vicinity of the very place that flammable material is used and kept.

We have not been informed that we are at risk of an explosion that would cause untold damage to ourselves and our homes.

Therefore the applicant is willing to put lives at risk by continuing his business at Babsham Lane all without the necessary permissions to do so on many levels.

We await your response.

Kind regards

Mr and Mrs van Koolbergen
