Subject: Planning @ Babsham - BE/30/19/PL

Dear Mr Davis

I note all comments regarding the planning application BE/30/19/PL but in particular wish to make comment regarding the email correspondences between yourself & Mr Michael Wood of Sloane & Brown in connection with amendments to the application form.

It has been agreed that the agent name and address needed to be amended from the original application made.

It is noted that now the hours being submitted are early than that from previous permission thereby allowing vehicles - whatever their shape/size and noise capacity - to be travelling down a semi-rural lane to access their place of work to start **before 0730 on a weekday**. Thereby becoming a noise nuisance and affecting local amenity.

It is also noted that the original application form had been written as a 'no' to hazardous substances kept on site.

Yet this has now been found to incorrect by yourself and re-confirmed by Michael Wood in that oxygen and acetylene will be kept on site.

Both of these substances - with or without being mixed - are considered to be of an explosive material and this is also confirmed after reading government guidelines.

Therefore I feel that the applicant/agent now need to re submit a new application form in the light of these omissions/mistakes.

Thank you.

Regards
