ELECTRIC VEHICLE CHARGING

Electricity supplies shall be extended from the small power systems within the units to column mounted electric vehicle charging points (EVCP) external to the building in the positions indicated on the design drawings.

The charging points shall be twin outlet type providing a single charge of 3.6kW per outlet or a combined charge of 7.2kW.

The design will be based upon the use of the Rolec 7.2kW BasicCharge:EV OpenCharge Charging Pedestal - Type 2 - 2 Outlet as the image below
