All

Update from James Kenny at West Sussex confirming no more archaeology work required based on what we have presented to him so far, the final report by PCA will no doubt confirm this and then he will advise Arun DC accordingly.

I have notified James of the planning application that was submitted (?) last week and the supporting material we included.

Arfon – as soon as it is validated please let me know and I can keep him updated. This should ensure no confusion arises and a prompt consultation response can be lodged.

Kind regards,

John Trehv BA MCIfA

Subject: NE. Garbox, Dogmer Hedges, West Sussex - End
of Evaluation Update

Hello Thom

I just had a look at the images (it takes ages to get file transfers through our IT barricades!). It seems that the site has produced little of archaeological interest, and it would probably not be reasonable to expect any further investigation. I'd like to suspend final judgement until I've seen a report, but that's the advice I'd expect to give to Arun.

Happy Christmas,

James

James Kenny

Hi James,

We have now finished the Geoarchaeological investigations at Salt Box, Bognor, West Sussex. The following is the summary of the findings from our geoarchaeologist:

'Although there were some minor localised variations in composition across the site, the sedimentary sequence was very similar and comprised cryoturbated chalk and flint overlain by brickearth, the lower parts of which at least were also soliflucted. There were no in-situ terrestrial or marine deposits present and the sieving only produced a few Meso/ENeo blades and some Bronze Age flakes and cores, all coming from the upper parts of the brickearth flint.'

We have also finished the investigation into the seemingly large 'linear feature' identified in trench 12. We excavated a further two small trenches to the north of the trench 12 in order to attempt to catch any possible linear feature, was however no extension of the feature was seen. As such we do not believe that this could a linear feature. We also undertook a machine excavated slot through the feature, which proved the feature to be relatively shallow and irregular, with what appears to be low energy water lain fill. I believe this feature should be interpreted as an anomalous, irregular hollow in the historic landscape and is unlikely to be of archaeological significance.

I have attached the site survey plan, that shows the detail of the site and, in particular, the detail of trench 12 and the two subsequent investigative trenches.

Following this email I will send a folder of photographs and drawings related to the anomalous feature in Trench 12.

If you have any questions or queries, please do not hesitate to contact me.

Cheers

Thom
