Dear Sirs,

New Era House, Oldlands Way PO22 9NQ

I have been asked by the site owners (Wiley) to apply for tree works to the row of mature italian poplars running west-east across the parking area south of the main building. The works are to fell four selected trees and to pollard the remainder at the site of the previous works carried out several years ago.

I have made a site visit and consider the works to be essential for the following reasons.

Many trees are showing signs of post maturity decline, possibly accelerated by the sealed surface up to within 1m of the base. It is likely that decay pockets exist at the base of many of the new stems.

The four trees to be felled are in a dangerous or moribund condition.

The remaining trees have been pollarded historically and the proposed works are necessary to contain the trees, and maintain safety and stability with consideration to the location of the row in an area of vehicular access.

Yours faithfully,

Stuart Power.
