Tim

Comments on revised proposals;

1. Connection to manhole S9 to be made at soffit to soffit level. Specify connection invert level/invert level of existing 450mm pipe.
2. Specify invert levels in discharge chamber. ie. 0.989 if intending to lay it flat, as per notes? A gradual rise would be preferred though.
3. The construction detail for the discharge chamber refers to existing manhole S9 and a 450mm outlet pipe. This is not the case. It should show a 250mm diameter rising main with a 375mm diameter outlet. There are some spelling errors too.
4. Improve angle of discharge of the rising main into the discharge chamber ie. not 90 degrees.
5. Existing spur (to be abandoned) into manhole S10 to be filled with concrete and the manhole made good. Add note.

Look forward to receiving your revised drawings.

Regards

Paul Cann
