

Blackbirds North Bersted Street PO22 9AH

The trees in question is a mature Sycamores in good health. The tree is a fantastic specimen and provides a good amity value to the surrounding area. The two Sycamores to the west lower canopies are now touching the roofs of the barn. The proposed works would be to crown lift the canopies to 5 metres in Hight and prune the trees clear of the barn by 2 metres.

The two joined stemmed Sycamore trees to the east have a lot of bark damage at the base that could be a potential fail point. The proposed work would be to pollard these trees at 5 metres height.

The last sycamore located on the far east on the property boundary. I believe that is we pollard the two trees to the west then this tree would be far too exposed. The proposed work would be to pollard this tree at 6 metres in height

We are keen to maintain the tree at a sensible size long term, so the proposed work would be in accordance of with British standards 3998.2010.

BE/17/17/T

New canopy height,
