Dear Jen,

In relation to the proposed development at the above referenced site.

Thank you for sending me the drawing 'Drainage Design' by MJA Consulting drawing number LHS232-1001 revision K. I have looked at the drawing as requested, to assess the relationship between the proposed attenuation at the north east of the site in relation to the existing trees highlighted for retention. Following our recent discussion, it is noted that the design of the 'crates' that form the modular attenuation area has been adjusted on the drainage plan so as to avoid impact on the RPAs of the retained trees T18 - T22. With T19 and T21, the crates still make very minor incursions into the RPAs. However, I have measured these incursions accurately in AutoCAD as being less than 2% of the RPA, which is unlikely to have any significant impact on the trees. As such, I can confirm that the drainage plan is considered entirely acceptable in arboricultural terms.

I trust this is of assistance.

Yours Sincerely

Tom Grayshaw *BA (Hons) Tech Cert (ArborA) Dip Arb L6 (ABC)*
