Hi Maria,

I have taken a look at the documents as this is not a case I am familiar with. From what I can tell the majority of the site is existing hardstanding and they are proposing formalising the existing access of loose material to concrete surface/tarmac.

In an ideal world we would expect the hard surface to be designed in a permeable construction. However, given the size and location of the site and our current resourcing I doubt that there is appetite to follow this up or scrutinise it further.

I have assumed that the query relates entirely to our view on the increased impermeable area rather than an assessment of the dust solution itself which I see Environmental Health have no objection to. With no experience in the issue I would not be best placed to comment on that.

I hope this is helpful. I have copied in Roger in case he would to add or contradict anything.

Kind Regards

Sarah Burrow

Sara,

I hope you are very well as you always do.

You havn't been consulted on the above application, however Dan was wandering if you would have an issue with 'dust solution'.

Concrete everywhere.

Plese let me know what do you think.

Kind regards

Maria
