Dear Claire and Neil,

I wish to comment on the BN/11/22/OUT application especially the addition of the Route of the A29 realignment South of Barnham road, recently submitted on behalf of Lichfields etc.

Several of the technical drawings supplied by Pell Frischmann raise serious concerns for my business and all of the staff employed on-site. The drawings show clearly that the project cuts straight across our entrance and signage which will severely affect the continuation of the business. The vicinity of the road to the building would also have a severe sound impact to all onsite.

We are a very successful Composite manufacturing Company with numerous prestigious Formula 1 teams on the order books, including this years' current World Champions. We employ and train many local, young people and we have even been recognised for our training scheme with receipt of a Business award. We have seen growth every year and have previously been in talks with ADC about expansion in order to supply yet more local manufacturing jobs and apprentices through our work with local colleges. This planning application if successful would change that for sure.

I feel that ADC should be helping businesses in the current climate and not building roads straight over them. If the A29 is realigned in the position on the plans submitted, I fear that our business will have no choice but to relocate to another area. An area which recognises the importance of local business ventures and helps them every way they can.

If permission is granted on this application, around 50 people's livelihoods could be severely affected. I understand the need for housing but it should not come at the cost of Jobs in the area. Surely there must be a more suited area to join the existing road??

Please take this letter as an **OBJECTION** and upload to the relevant planning comments page.

Yours sincerely,

Luke Biddlecombe
