

Tree works & Quote

Richard Martin

Dear Mr & Mrs Moss,

Here's some wording for the application. Let me know if you need any more detail.

Proposal:

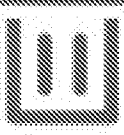

A repeat operation to re-pollard oak back to previous points, reducing the canopy by 1-3metres (image April 2019).

Reason:

Oak trees bifurcate at 0.5m, exhibits a longitudinal cavity. Evidence of active decay with brown rot within the heartwood , fruiting bodies are present (Laetiporus). Aim to reduce sail area and manage risk of failure.
