Dear Sirs,

Re: Application BN/13/14 Proposed development for 75 Dwellings in the field adjacent to Goodacres. Barnham, West Sussex.

Please find enclosed letters of concern and protest about the above development.

We await your response.

Yours faithfully,

From Residents of Goodacres including Churchill House.

Resident of:

1 PARK COTTAGES

Goodacres

Barnham

West sussex

PO22 0JF

Application  
BN/13/14

14/6/2014

**This letter is a representation of each of the residents that live within the road of Goodacres in Barnham, to express our deep concerns and feelings regarding the proposed development for 75 dwellings in the field adjacent to Goodacres.**

Goodacres has had many sink holes and depressions in the ground over recent years, these sinkholes have varied in both diameter and depth causing significant problems. This should have been well documented by Arun district council and so they would be well aware of this. This shows the ground is not structurally safe or sound by any means.

The drainage system is old within this area causing a lot of problems and overflow due to this, the new purposed houses would only increase and worsen this ageing system.

Over the years flooding has become increasingly worse not helped by the worsening weather causing a lot of surface water, at the moment the majority soaks away in the field causing less problems for the surrounding and adjacent houses not to become flooded. The area becomes very water logged at times and is uneasy under foot, however water does also flow to the bottom of Haliford Drive adjacent to Lake Lane, where over the winter months pumping lorries worked 24/7 to remove the water at cost to the tax payer. This went on for many consecutive months and is now an on going scenario when it rains heavily.

With regards to Goodacres being the main access road it is of great concern to the residents in Goodacres and especially the elderly residents living in Churchill house that seeing as Goodacres is already a busy and congested road, the additional concentration of traffic and indeed roadside parking will no doubt create a safety hazard for the local residents, animals and for other motorists because of the increase in cars if this development were to take place.

There is also a problem with local residents trying to park outside their properties which will only worsen with more cars wanting to park. This already is an issue in so far as others also using Goodacres to park there vehicles while they go to work, not returning until the evening.

The field has become a natural habitat in all aspects over the years for many types of animas and wildlife ranging from protected animals such as nightingales, slow worms and bats to the more common animals such as foxes, rabbits, squirrels and many type of birds etc. No matter what measures could be put into place their haven would be destroyed for ever.

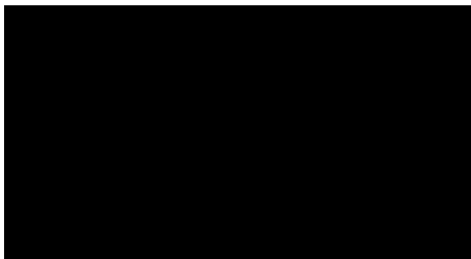

Doctors, schools and dentists are over flowing in Yapton, Westergate and Barnham already due to Barnham not having there own doctors surgery, dentist or health centre which results trying to get an appointment becoming near enough impossible. This then results in having to go the local hospital to see a doctor putting more pressure on the already stretched resources.

If any of the problems that I have mentioned above have any adverse effects on my/our properties causing problems, damage, increase of water and/or drainage I/we shall hold yourselves responsible and shall take legal action against you.

The practicality of building a new development here is far more detrimental then good in just these points alone that I have listed, not taking into account the costs to be paid, whether this is financially or otherwise.

We would all like to put these concerns across for your consideration when making your decision on the proposed site at Goodacres in Barnham.

Regards

| ACTION...                                  |

14/6/2014

**This letter is a representation of each of the residents that live within the road of Goodacres in Barnham, to express our deep concerns and feelings regarding the proposed development for 75 dwellings in the field adjacent to Goodacres.**

Goodacres has had many sink holes and depressions in the ground over recent years, these sinkholes have varied in both diameter and depth causing significant problems. This should have been well documented by Arun district council and so they would be well aware of this. This shows the ground is not structurally safe or sound by any means.

The drainage system is old within this area causing a lot of problems and overflow due to this, the new purposed houses would only increase and worsen this ageing system.

Over the years flooding has become increasingly worse not helped by the worsening weather causing a lot of surface water, at the moment the majority soaks away in the field causing less problems for the surrounding and adjacent houses not to become flooded. The area becomes very water logged at times and is uneasy under foot, however water does also flow to the bottom of Haliford Drive adjacent to Lake Lane, where over the winter months pumping lorries worked 24/7 to remove the water at cost to the tax payer. This went on for many consecutive months and is now an on going scenario when it rains heavily.

With regards to Goodacres being the main access road it is of great concern to the residents in Goodacres and especially the elderly residents living in Churchill house that seeing as Goodacres is already a busy and congested road, the additional concentration of traffic and indeed roadside parking will no doubt create a safety hazard for the local residents, animals and for other motorists because of the increase in cars if this development were to take place.

There is also a problem with local residents trying to park outside their properties which will only worsen with more cars wanting to park. This already is an issue in so far as others also using Goodacres to park there vehicles while they go to work, not returning until the evening.

The field has become a natural habitat in all aspects over the years for many types of animals and wildlife ranging from protected animals such as nightingales, slow worms and bats to the more common animals such as foxes, rabbits, squirrels and many type of birds etc. No matter what measures could be put into place their haven would be destroyed for ever.

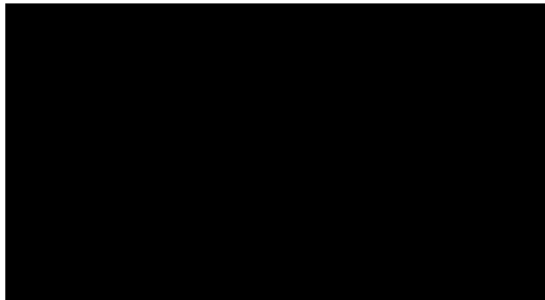

Doctors, schools and dentists are over flowing in Yapton, Westergate and Barnham already due to Barnham not having there own doctors surgery, dentist or health centre which results trying to get an appointment becoming near enough impossible. This then results in having to go the local hospital to see a doctor putting more pressure on the already stretched resources.

If any of the problems that I have mentioned above have any adverse effects on my/our properties causing problems, damage, increase of water and/or drainage I/we shall hold yourselves responsible and shall take legal action against you.

The practicality of building a new development here is far more detrimental then good in just these points alone that I have listed, not taking into account the costs to be paid, whether this is financially or otherwise.

We would all like to put these concerns across for your consideration when making your decision on the proposed site at Goodacres in Barnham.

Regards

MRS. JANE SHEFFIELD.
