Littlehampton

Subject :-BN/18/20/PL variation of condition 15 under EG/29/13/change of foul water drainage scheme from Sewage Treatment Plant to Pumping Station (with associated drainage works)

I have recently noted the above application and would like to protest against this application.

I reside within a few metres of the Barnham Road (B2233) and Elm Grove South junction where the main sewage pipe is located. Over the years it has proved to be a problem spot and I have had to complain recently to Southern Water Company on two occasions when sewage was forced out of the sewers onto the main road and all over my front drive. Southern Water gave me a 12 months reduction of fees on the first occasion but no action was taken on the 2nd occurrence. My neighbours were also affected by the sewage discharge.

On another occasion 2 toilet lids were blown open and sewage discharged into my bathrooms. Not a very pleasant experience. I spoke to the workmen at the junction previously described, who were using some form of vacuum to clear a blockage and was told of problems at this site.

I would therefore like to register a protest and ask that the variation of conditions as applied for be denied on the basis that any further sewage in an already overloaded system would cause problems to the residents on Barnham Road, Elm Grove South and the pupils at St Philip Howard School.

A further 42 houses at Upton Brooks with 2 toilets each could only cause further flooding of the sewage system.

Yours sincerely,

Anthony Stansfield
