

7. The tree in question is a very mature Montrey pine, approx 60foot in hight with the crown spreading to 35foot in diameter. In the recent high winds of January Mr Robbins has become increasing concerned as the tree was left with 5 snapped branches that had to be removed. After looking at this tree in person it it clear to me that long turn this tree will cause future issues if not pruned immediately.
- We Would like to apply crown reduce to tree by 3metres, this intern will reduce the weight of the long lateral branches and reduce the risk of any future breakages.
