

Tree Survey – Work to be carried out on 2 trees

Location – Church Lane, Eastergate

Properties involved are The Lodge, Church Lane (applicant) and Clarendon House, Church Lane.

Work

This application is to carry out work on 2 trees – marked A1 and A2 on both of the sketch's provided within the application.

Both the trees marked A1 and A2 on the sketch map are Ash trees.

The proposal of work to be carried out is to perform Crown Reduction on both trees.

The trees are of a very large size and to my knowledge have not been maintained/had any work carried out in the ten years that we have resided at the property (The Lodge, Church Lane). Both trees have a large amount of debris fall in windy weather and some branches are quite large.

In respect of tree A1 some large branches significantly overhang onto the front of our property and are above parked cars and the garden fences and have gradually moved towards the right hand (when looking from front door) side of the front of our property. As mentioned a fair amount of debris including branches several feet in length have fallen from the tree on to the property. Following the completion of the Crown Reduction work the tree would be 8 metres tall.

Additional Information Requested - The spread following pruning for the tree A1 will be 6 metres

Tree A2 which resides in Clarendon House (next door) but overhangs the roof of our property also has a fair amount of debris fall and again includes some significant branches which also fall on to the roof as well as the side of the house again with vehicles parked below. This tree has also grown through the telephone line to the property. Following the completion of the Crown Reduction work the tree would be 10 metres tall.

Additional Information Requested – The spread following pruning for the tree A2 will be 8 metres.
