

Dear Raymond,

Thank you for consulting us. Please can the applicant supply a plan showing a 10m buffer around the proposed infiltrating basin.

Given the likely presence of chalk here it is anticipated that additional easement to infiltrating features will be required as a result of the risk of dissolution of chalk and the formation of sinkholes. Specialist geotechnical advice should be sought at discharge of conditions stage.

Depending upon ground investigation results the basin may need to be made shallower to ensure there is some depth of cohesive material above the chalk to reduce the risk of contamination of the groundwater aquifer.

Kind regards,

Laura Gibbons
