Planning Statement

David Ayre. Mill House, Yapton Road, Barnham, PO22 0BD [redacted]

For the installation of the proposed system is to consist of 26No Perlight 400Wp solar panels installed on a sunfixing ground mounted system onto the grounds of the above address. Away from public roads and footpaths this will have minimal impact to the surrounding area while greatly improving the renewable energy to the property and becoming less reliant on fossil fuels.

The latest generation of Perlight's Delta range offers a totally all-black appearance through the use of ribbon busbar technology. Coupled with a high density layout leading to increased cell surface area, the modules also delivers a 21.3% efficiency in a small footprint. Environmental credentials are also high - production is fluorine free, uses 60% less lead than conventional modules and 300g less metal per module thanks to the ribbon busbars.
