BR/106/18/A

The proposal is located within the station building which is a statutory listed building. It is also set within a conservation area. I should point out that the Design and Access Statement is incorrect in this regard.

The station has been the result of complex restoration and renovation which has included the removal of unnecessary clutter from the concourse. The need for a cash point is noted as part of the customer experience.

The design is fairly standard, and it is noted that permission is sought for the lighting element of the cash point. Further, it is also noted that the application is retrospective in nature.

In line with the initial concept of the restoration/refurbishment works, it is considered that the amount of signage/lighting should be kept to a minimum. I note that the application is for one illuminated sign. This appears to be a fairly small sign that will have a neutral impact on the listed building, and the conservation area. It is also located within an area of other necessary infrastructure such as the network of cables, which reduces its impact.
