Subject: RE: Planning Consultation on: BR/196/20/PL

Dear Planning,

Please see Private Sector Housing comments, below.

Fire Safety

- Appropriate fire precaution facilities and equipment must be provided of such type, number and location as are considered necessary. Guidance on fire safety is contained in the LACORS guidance document – “Housing – Fire Safety, Guidance on fire safety precautions for certain types of existing housing”
- The external fire escape serving the first and the second floor should be protected from the effects of fire along its length. The sensitive area is 1.8m horizontally, therefore any windows in this region should be of fire resisting construction and any doors should be fire resisting and self-closing
- There should be adequate fire separation (usually 60 minutes) between the commercial units on the ground floor and the residential flats above

- The internal escape route should provide 30 minutes fire resistance, including the provision of 30 minute fire resisting and self-closing fire doors (FD30S) to each flat entrance
N.B. The location of the electrics does not appear to be included within the plans. If they are located within the 'CLE STAFF' cupboard on the first floor landing then a FD30S door will be required to this cupboard. If they are located along the escape route, a 30 minute fire resisting enclosure must be provided
- A mixed Grade A, LD2 and Grade D1, LD3 fire system should be maintained and installed
Grade A, LD2 system:
 - Interlinked detection within both commercial units
 - Interlinked heat detection within the commercial unit kitchen area
 - Interlinked detection throughout the escape route
 - Interlinked heat detection to each flat
 Grade D1, LD3 system:
 - Non-interlinked mains-wired smoke alarms with integral tamper-proof battery back-up to each flat
- Fire blankets should be provided to all kitchen areas
- Emergency lighting may be required to the internal escape route due to lack of natural and borrowed light
- Conventional and emergency lighting to be provided throughout the external escape route

Ventilation

- Kitchens should have adequate mechanical ventilation
- Mechanical extraction should be provided to all bathrooms/shower rooms/en suites

Windows

- Opening limiters should be installed to all windows above the ground floor to prevent windows being opened more than 100mm. Opening limiters should not be key operated
- The roof windows serving flats 1, 2, 3 & 4 should be of an appropriate height and angle to provide a reasonable view outside of the immediate surroundings

General

- The application states there will be 10 residential flats comprising 5x 1 beds and 5x 2 beds, however the proposed plans show there will be a total of 12 residential flats comprising 2x studios, 9x 1 beds and 1x 2 bed
- The property must meet the requirements of the Housing Act 2004 and be free of Category 1 and significant Category 2 Hazards
- Flat 5 has the potential to operate as a House/Flat in Multiple Occupation (HMO), depending on how it is occupied. If the flat becomes an HMO, it must;
 - meet the requirements of the Arun District Council Houses in Multiple Occupation Standards (2020);

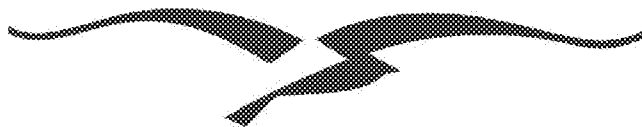

- meet the requirements of The Management of Houses in Multiple Occupation (England) Regulations 2006; and
- meet the requirements of any other associated Housing and/or Houses in Multiple Occupation legislation or regulations (if applicable) to the property/site

Kind regards,
Chantelle

It is a criminal offence to operate a licensable HMO without a licence	Landlords must apply for a mandatory HMO licence if their property is occupied by five or more people in two or more households regardless of the number of storeys. If you own/manage a house in multiple occupation subject to the new legislation and require more information please visit www.arun.gov.uk/hmo If you suspect an HMO is operating without a licence, or are concerned about the standards of an HMO, please contact us.
