Dear Mr Davis

In the Arboricultural Impact Assessment that the applicants have had done, it states under number 4.7 that "The levels of the driveways located adjacent to the no dig parking bays will need to be raised to match. This should not be an issue particularly as the floor levels of the houses will be raised above the existing ground level.

Well it will be a issue to us because this is directly behind our garden and this is the low lying area that pools with water that stops any flood water/excess heavy rain water coming into our garden, raising this is area is going to alter land levels and cause existing residents to flood.

Have you read this paragraph?

Kind regards

Rebecca Lovett
