Dear Katherine,

the tree consultant has identified that a climbing inspection is necessary for both Austrian Pine trees located near to the rear of the applicants property within the garage complex. The consultant recommends a crown thin by 15% to reduce the sail area. Both proposals are acceptable and I would suggest that the majority of the 15% thin consist of weak growth and deadwood removal.

If during/after the climbing inspection reveals a major structural defect/s and where evidence can be presented to the Council to show the tree/s is/are in imminent danger of failure then their removal would have to be considered.

Yours sincerely

Ian Brewster
