Subject: Butlin's Temporary venues – External lighting

Introduction

The only lighting provided to the external elevations of the building is that legally required above Emergency Exits. Each elevation has a maximum of 4 exits/lights. Lights are only illuminated in the event of a power failure or a positive fire alarm.

Technical specification

All external emergency exit lights are non-maintained – so they only illuminate in the event of a mains failure or a positive fire alarm. Once illuminated, the internal batteries maintain light for a minimum of 3 hours. The lights turn off when power is restored, or an alarm is reset.

Maximum brightness is 200 lumens per unit.

General arrangement
