

This sheet provides a brief description of what information is held

RESULTS TAB

Occupancy Vehicles by Link Table :- This table shows the occupancy within the study area throughout the survey day. The graph below

PARKING TAB

Vehicle Information :- This tab contains all the VEHICLE information queried by using the filter option to select specific streets, timebins

CAPACITY

Length of classifications (m) by link :- This table shows the length of each restriction is taken from a site visit using GIS and measuring higher it is in the survey hierarchy. For example a Double Yellow line

Calculated capacity (spaces) by link :- The table shows the number The first method is to count the actual number of physical individual the spaces are not individually marked or there is no restriction pre by 5 m (Standard car length) rounding the value "DOWN" at all calc

LINKS CLASSIFIED

Link Classification :- This tab contains all the individual link (Classification titled "Count of Vehicles" is the number of vehicles captured parkin dividing the number of vehicles captured by the number of spaces a

STRESS LEVEL

This table shows the capacity stress level (Legally Parked Only) for vehicle are parking closer together and the number of vehicles recorded of 29.2 m / 5 m = 5 Vehicles. However, in practise it would be possi

within each tab of this document, and how the results were achieved.

y per street / per beat. Therefore the maximum total value is the maximum number of vehicles present this table shows the "Accumulative" capacity - street by street stacked.

n data which has been linked spatially to its nearest classified link restriction. This information can be easily , classification and much more. .

(Metres) of each classification within each street, that has been surveyed as part of the project. The length g the kerbside length. Only kerbside restrictions are captured, the more enforceable the restriction the ie is more enforceable than a dropped kerb. Where there is no kerbside restriction present this will be of spaces available within each individual network section (No of Spaces). This is calculated by two methods. al marked spaces within the section (example 5 number Parallel Bays). The second method is used where sent, to calculate the capacity using this method we would take each individual section length and divide it culations. As each restriction length is calculated individually, the combined value of capacity will often be

ed Restrictions) within the survey area providing details on the ID, Class, Length and Capacity. The column ig on the section throughout the survey period which is used to calculate the next column "Turnover" by available.

each street within the survey area for each beat conducted. It is possible for % capacity to exceed 100% if rded within a beat is greater than that of the Capacity Calculation detailed above (Example. a section length ble to accommodate 6 vehicles).

Vehicle Occupancy by Link
