3.0	summer solstice june 21	13

- 1.1 Cover Storey Architects have been instructed by Vahnea Marolda Investments LLP to prepare and submit a Sun Path study to Arun district council in support of the planning application for the development of the existing rooftop of plot 18-20 London Road, Bognor Regis, currently occupied by Wilko retail store for use as student residences. This scheme has previously been approved (Ref:BR/270/018/PL).
- 1.2 Through the pre-application stage of the submission (ref: PAA/65/16/), a main concern was the uncertainty of over-shadowing on the existing London Road retail street adjacent to the proposal.
- 1.3 The purpose of this Sun Path study is to identify how the proposed massing would affect adjacent properties and public space. Please note that variations of this study have been utilised throughout previous proposals (ref: BR/270/018/PL & PAA/65/16/) and findings have altered the development of the proposed design to minimise over-shadowing. This document contains information relevant to the proposal at the time of the planning application.
- 1.4 The methodology used to gather and record information will be through a combination of topographical and ordnance survey data, combined with 3D computer modelling using the software Autodesk Revit with IES Virtual Environment sunlight and location information for Bognor Regis, and represented through a progression of still images at one hour intervals on the summer and winter solstices, dated June 21st and December 21st respectively.

winter solstice december 21 2.0

2.0 The following images have been produced to demonstrate the shadow cast by the proposed development in the context of surrounding buildings on the date December 21st. Sunrise will occur at 08:05, and sunset will occur at 15:55. For this a set of nine images have been generated to cover the time between 08:00 and 16:00 at hourly intervals.

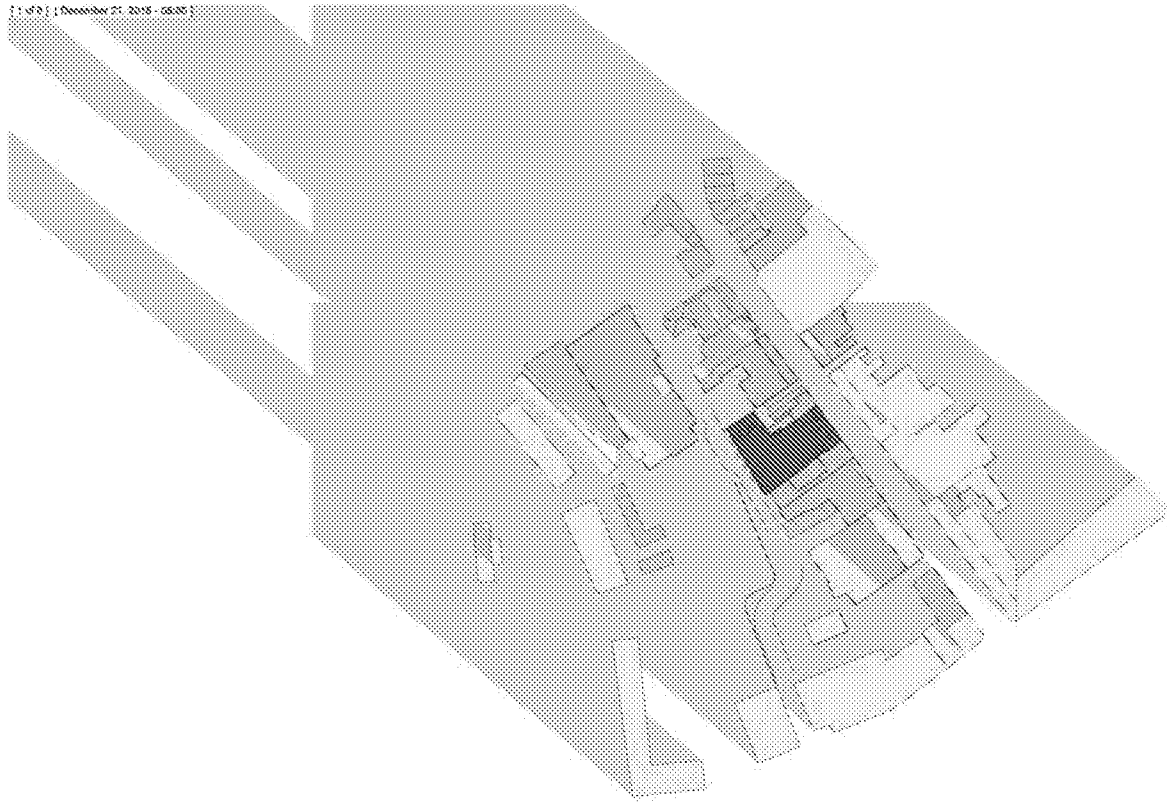

Shown opposite is the time 10:30 where the existing retail buildings will begin to over-shadow London Road. It is apparent that by this time, the proposed development will remain casting shadows over adjacent uninhabitable rooftops and partially cast shadow over the street to the North of Macari's cafe, on the corner of Bedford Street. This image aides to help orient the reader and the following images demonstrate that **no further over-shadowing will occur on the London Road retail street during the latter months of the year following the proposed development.**

Existing

2.5 21 December
12:00

London Road retail street is almost entirely in shade from the existing two to three storey retail units. The Proposed Development casts a shadow which is indiscernible from the existing shadows which already over-shadows London Road and thus the proposal does not over-shadow any previously unshaded areas.

summer solstice june 21 3.0

3.0 The following images have been produced to demonstrate the shadow cast by the proposed development on the date June 21st.

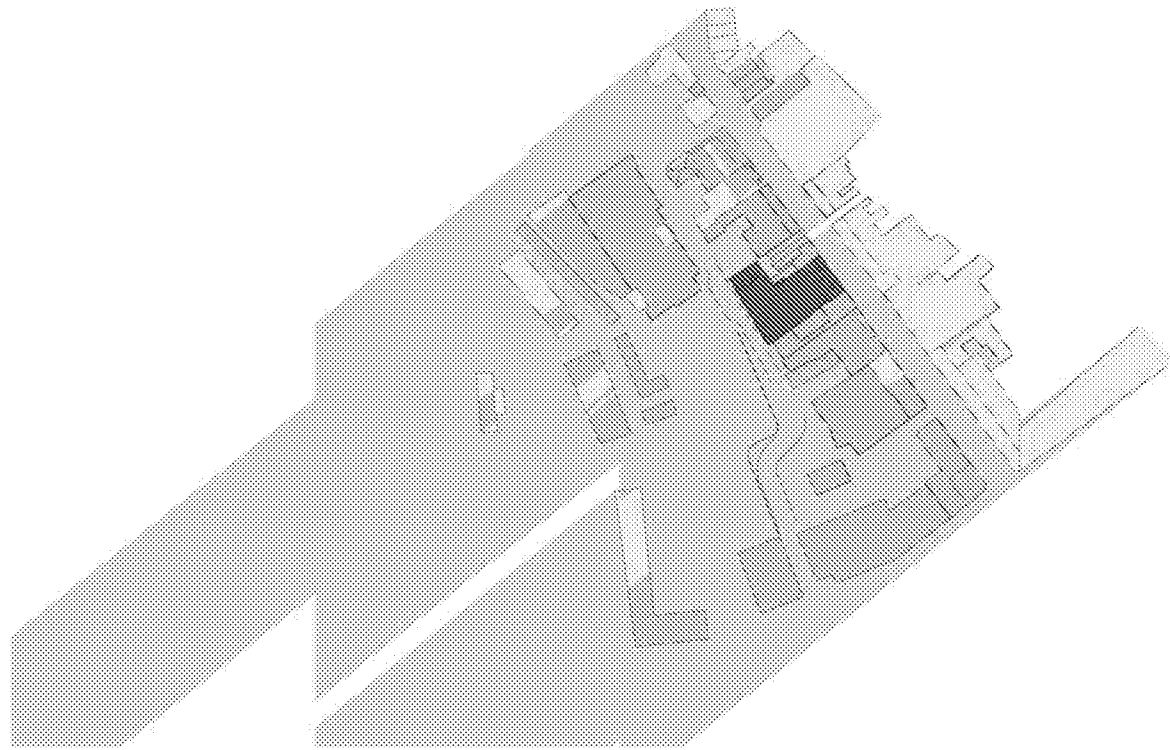

Sunrise will occur at 03:52, and sunset will occur at 20:16. For this a set of seventeen images have been generated to cover the time between 04:00 and 20:00 at hourly intervals.

Shown opposite is the time 15:52 where the existing retail buildings will begin to over-shadow London Road. It is apparent that by this time, the proposed development will remain casting shadows over the adjoining uninhabited rooftop rather than London Road. This image aides to help orient the reader and the following images demonstrate that **no further over-shadowing will occur on the London Road retail street during the summer months of the year following the Proposed Development.**
