Why Glass/Glass technology?

Glass/Glass (G/G) modules are produced by laminating PV cells between two glasses, instead of standard glass and plastic.

In comparison with standard modules, the same glass material resistance and heat dispensing is more durable in fluctuating temperatures, hot and humid climate zones, ensuring 30-40 years lifetime.

Unlike other G/G modules in the market, Solar Electric Glass uses innovative edge-sealant technology to protect PV cells from humidity.

PV cells are manufactured in-house using advanced technologies ensuring elimination of potential induced degradation (100% PID free cells).

Both cells and modules are manufactured using green energy – geothermal, solar and hydro power.

Glass / Glass Model No STKP - 60 - 260 260Wp Polycrystalline 60 cell module

Glass/Glass modules – advanced choice for those who look for durability, safety, efficiency.

KEY FEATURES

30+ year lifetime. Edge-sealant protection assures superior atmospheric and humidity resistance.

Back glass instead of plastic assures durability and robust protection against UV, moisture, ammonia and salt corrosion.

Higher heat dispensing. Glass is better thermal conductor than plastic back-sheet in standard modules ensuring higher efficiency in hot climate.

Possibility to bond the PV modules with adhesive material.

100% PID free cells. Potential induced degradation is eliminated at cell level using PVB lamination foil.

Compliant with IEC 61215:2005, IEC 61730:2004 standard

Wider light spectrum absorbed. PVB lamination foil utilise light spectrum starting from 280nm.

Customised choice. Range of dimensions, forms, colours and efficiency for BIPV solutions.
