Subject: RE: BR/65/11/T 2 Queens Square Glamis Street Bognor Regis PO21 1SA

Dear Janice,

the above application does not provide justification for the removal of T1 Lime. The tree is the smallest of the other four trees and appears to have been pollarded at a height of approximately 4-5m at least 30 years ago. There is dense branch growth were some grow near to the building. It is recommended that this tree is crown reduced, allowing for 4m to be cut from the branch tips inwards towards the main stem. The severance of Ivy at the tree base may help alleviate the shade nuisance and should be considered.

The other four trees appear mature and lack vigour were the majority of active crown growth appears to be around the periphery of the crown. There is little inner crown growth to prune back to. It is recommended that the other four trees T2, T3, T4 and T5 have minimal works. The work should consist of

5.5m crown lift, restricting the removal of branches with stem diameters to not exceed 100mm.

There are telephone wires which pass through the crowns of the trees and branch growths should be pruned to provide a minimum distance of 1m, restricting the removal of branches with stem diameters to not exceed 100mm.

There are some dead branches and stubs within the crown which should be removed as part of the above work.

Yours sincerely

Ian Brewster
