Dear Mr Rossner,
Please see the Engineers comments below in respect of the additional information submitted.
Can you let me have clarification of the remaining points raised within the next 7 days?
Regards
Anita Gardner

Essential maintenance is being carried out to the planning, building control and local land charges database during the week commencing 12 April 2021.

During this time there will be no public or staff access to any records held within this database, and it will not be possible to carry out any of the following tasks via the Arun website:

- Research planning and building control history
- View any planning applications, plans, agreements, tree preservation orders or competent persons data
- Submit building control applications
- Submit planning application comments
- Report any planning compliance issues

The publicity and consultation period for all planning applications that fall over this week will be extended by a further week to ensure no one is disadvantaged.

All other aspects of planning, building control and local land charges will be limited during this week and you are strongly advised to contact the individual departments before 12 April 2021 for specific restrictions during this time.

Key

ADC comments 16/03/20

Applicant response 30/03/20

ADC comments 20/04/20

Condition 11- Surface Water Drainage Design

1. Greenfield runoff rates are based upon total site area rather than impermeable area that is draining to attenuation. Please restrict discharge to greenfield QBar for the area positively drained, or to 2l/s (whichever is greater). This has been revised and the new calculations are attached. *Okay, point closed.*
2. The impermeable areas plan appears to use an old layout, not the latest layout as approved under CM/55/20/PL. Please provide an updated impermeable areas plan. Updated plan attached to be read alongside the new calculations / drainage modelling. *Okay, point closed.*
3. The long section on the drainage details sheet 1 refers to a hydrobrake with a restriction of 2.0l/s, which conflicts with the calculations, other details and layout (although addressing point 1 will affect these). This is now correct after the revised calculations, other details have been updated accordingly. See comment below.
4. Please detail finish and formation levels of permeable paving on plan. These are shown in the detailed sections but have also been added to the plan. *Please detail on driveways.*
5. Please make the permeable paving construction details clearer. I.e. please provide one which clearly details the driveway construction, and one which details the road construction. Both must clearly state minimum required sub-base depth. I have updated the sections to show one for the access road and another for the driveways. *Drainage details 1 of 2 not provided with this package of information, please provided.*
6. Please detail all pipe diameters and falls on plan. Plan updated. *Please detail pipes in permeable paving driveways.*
7. No connections are shown to/ from the permeable car park areas. We have now shown a connection into the storm drainage system.
8. Please provide site specific construction detail drawings of the proposed headwall, this should include a plan and full cross section through the ditch. All headwall drawings should indicate existing bed level, and top of bank level. Detail updated. *Two sets of drainage details sheet 2 have been provided, please confirm which version should be reviewed.*
9. I note that it is proposed to have a 100mm thick concrete cover slab over the top of the perforated main pipe, with 150mm each side of pipe work. This would have to be constructed very carefully so as not to cause concrete ingress into the perforated pipe, and it will also result in a strip of road being impermeable.

Has the use of diffuser units been considered instead with a small fall in formation over the site? The outlet diffuser unit would have to be at the base of the sub-base. As should the pipe at the downstream end if this is to remain. We have updated the details to show diffuser units where possible. Okay, please detail invert levels of diffuser units.

Condition 12- discharge of flows/ culverting

1. Please supply further details of the proposed culvert, i.e. diameter, invert level, and construction details- including headwalls. We have put more information on the drawing on the details drawing. *Two sets of drainage details sheet 2 have been provided, please confirm which version should be reviewed.*
2. It is stated on the plans that the culverting has been agreed, we do not believe this to be the case. Please supply evidence that an application for land drainage consent has been made for both the proposed culverting and outfall headwall. This has been applied for and we are issuing new information and the application is ongoing. Okay.

Condition 13- maintenance manual

1. The maintenance manual should be updated to reflect the current drainage design. The maintenance manual has been updated to suit. Okay, will be reviewed once design is finalised.
2. The maintenance manual refers to gullies, it is not clear where these are on the plan. This has been removed from the maintenance manual. Okay, will be reviewed once design is finalised.
3. Details of the maintenance requirements of the hydrobrake are insufficient. How frequently this should be inspected, cleared of debris, etc. should be clearly contained within the maintenance manual. Updated as required. Okay, will be reviewed once design is finalised.
4. The maintenance requirements of pipework and catchpits should be included. Updated as required Okay, will be reviewed once design is finalised.

Kind regards,

Laura Gibbons

Hi Laura,

Do these details satisfactorily address the points raised and allow the condition to be discharged?

Thanks

Anita
