Subject: SOS Objection to CM/17/PL and CM/34/17/L

Hello Ross,

Further to our phone conversation this morning, attached is the SOS letter objecting to these two planning applications. Also attached is a list of the 156 species of birds that have been recorded in the surrounding one-km square TQ0101.

We note that some building work already appears to be underway on the site. Has this been approved?

Regards,

Richard Cowser
(SOS Conservation Officer)

Littlehampton,
West Sussex BN17 5LF

Dear Ross,

Planning Applications CM/33/17/PL and CM/34/17/L

Further to our telephone conversation this morning, the Sussex Ornithological Society (SOS) **objects** to these planning applications on the following grounds:

- 1) As far as we can see no request has been made to the Sussex Biological Records Centre (SxBRC) to supply their records of all the flora and fauna around the site. We would contend that without this data no proper ecological assessment has been made.
- 2) In the absence of any SxBRC data (including bird records) we attach the bird records for this century for the one km square TQ0101. 156 species of UK birds have been recorded in this one-km square since 2000. The Sussex bird list currently stands at 404 species across over 4000 one-km squares in West and East Sussex, so TQ0101 is a real birding "hotspot" in the two counties, with over 38% of the species on the Sussex list having been recorded in this one-km square alone. The Ecological Assessment makes no mention of this.
- 3) We recognise that many of the bird species on the attachment are sea birds that will have been recorded on the nearby beach or on the sea close in-shore, rather than having been seen on the application site itself. Nonetheless, significant species such as Grey Partridge have been recorded in the vicinity of the site and may well have bred there.
- 4) However, this site (and the surrounding area's) most notable significance for birds is as a hot spot for migrants. Yellow-browed Warbler, Hoopoe, Pied Flycatcher, Spotted Flycatcher, Common Redstart, Lesser Whitethroat, Cuckoo, Firecrest and Hobby have all been recorded around Climping Mill itself, and an impressive list of other migrants have been recorded nearby in other parts of TQ0101.

- 5) All are attracted to this part of the Sussex coast because the Climping Gap is one of the last undeveloped pieces of coast between Bognor Regis and Peacehaven. The hedges, bushes and trees around TQ0101, which extend along the north side of Littlehampton Golf Course to the east and to around Baliffscourt to the west, offer darkness (and therefore protection), as well as shelter, food and relative freedom from disturbance for birds that have just flown 60 miles north across the English Channel in the spring, or are resting up prior to making that journey south in the autumn.
- 6) Therefore, from a birding point of view, the last thing that we would want to see happen is for 1.6ha of land in the heart of this dark area to be flattened and re-landscaped, and for a large glass-fronted two-storey building to be built. Few more damaging, light-polluting developments could be envisaged from the point of view of migrating birds.
- 7) There are other reasons for our objection:
We understand that the Emerging Local Plan shows this area continuing to be the Climping Gap, a strategic gap on which no housing development is shown to be planned. This development would therefore be a departure from the Local Plan as we understand it.
- 8) We understand that the justification being put forward for this new development is that the windmill building, which is a listed building, will also be restored. However, we also understand that whilst the proposed new house would be designed to withstand sea flooding, no such arrangements would be put in place for the listed buildings. i.e there is an expectation that in time the listed buildings would be flooded by the sea, but that the new dwelling would float above the floods. So long-term restoration of the listed building does not appear to be the justification. Which begs the question as to what is the justification for the new floating house, with all its attendant destructive landscaping?
- 9) To be clear, what we are objecting to is the complete re landscaping of the whole site, the massive destruction that will occur to dig out the pond on which the new building will be able to float, and the design of the new building which will be extremely light-polluting, as the design includes two sides which have completely glass walls.
- 10) What we might find acceptable would be the refurbishment of the current Mill House and cottages, provided no further destruction of flora occurred, and that re-landscaping was minimised, no new buildings were erected and some new tree planting to replace those already destroyed took place.
- 11) We are also concerned that building work appears to be going on now, without this development application being determined. Are Arun DC happy that this is happening?
- 12) We totally reject the conclusion of the Ecological Assessment that the site is of "low" value, for the birding reasons explained above, as well as the apparent failure to ask the SxBRC for any records. Moreover we note that bat droppings have been found in two of the buildings on the site (apparently of Brown Long-eared Bats - which is what we presume BLE is - as well as Common and/or Soprano Pipistrelle Bat – although which one is not specified. Table 4 of the Biodiversity Assessment states the probability of Bat roosts being present as "High Potential", whereas section 4.3.3 dismisses bat

roosts as being of “low conservation significance”. The latter is a conclusion that we find questionable, especially as this section fails to mention the presence of Brown-Long-eared Bat – it only mentions Pipistrelle.

- 13) The Biodiversity Assessment also talks about reptiles but fails to mention Amphibians. As a data request to SxBRC would show, Great Crested Newt are in the ponds and some of the surrounding ditches at Baliffscourt, less than 2 kilometers from Climping Mill. Surveys for them need to be undertaken before any development takes place. (And obviously such surveys need to take place at the appropriate time of year - so they need to avoid the late April to early June period when all Great Crested Newt are in ponds and not on land).
- 14) The unique design of the new floating house is because the site is expected to flood as sea levels rise. Although the development site itself is several hundred meters from the sea the access road to the site runs right beside the sea behind the WWII defences behind Climping beach. In the last two months these WWII defences have collapsed in the 2017/18 winter storms, and unless new sea defences are put up it would appear that the access road will disappear in a matter of years rather than decades. Shingle swept in by winter gales has already covered the road and has had to be cleared in several of the last few winters. To a layman it would appear that the present access to this site is not sustainable unless someone is prepared to invest a lot of money in building new sea defences to protect the road to Climping Mill. I am not aware that any such investment is planned. For this reason alone it does not appear a suitable site for development, since road access to the site appears under much more imminent threat from sea-flooding than the site itself.
- 15) To summarise:-
 - Development on this site in the strategic Climping Gap is a departure from the Local Plan.
 - Whilst there is a plan to protect the new house from expected sea flooding, there is no plan to protect the listed windmill building. Restoring the listed building in return for allowing the new house to be built, therefore, appears likely to be of no long term benefit. In our view it is not therefore of sufficient justification to offset the immediate loss of important wildlife habitat, including habitat that is very important for migrating birds.
 - The Biodiversity assessment is completely inadequate and no attempt has been made to access the records of all the flora and fauna that have been recorded in this area. Aside from completely failing to recognise the importance of the area for birds, it notes that bats roost on the site but dismisses this as of “low conservation significance” – a questionable judgement. It also fails to recognise that Great Crested Newt are known to be in the Climping area.
 - As can be seen from the bird records supplied with this letter this is a birding hotspot, particularly for migrant birds who flock to this area because it is dark, undisturbed and provides food and shelter. It is within the Climping Gap, the only significant stretch of undeveloped coast between Bognor Regis and Peacehaven.

- Were this site to be radically landscaped and the new dwelling built, habitat would be lost and light pollution – nearly completely absent at present - would become very evident, thus degrading one of the habitat features that makes the Climping Gap so attractive to migrating birds.
- Not only is the site expected to be flooded by rising sea levels at some stage in the future, but its access road appears to be under much more immediate threat judging by the already visible impacts of this winter's storms. Unless there is investment in sea defences (and we know of none that is planned) the viability of maintaining continued access to the site in the near term must be in question.

16) For all these reasons SOS believes that these two planning Proposals should be rejected.

Yours sincerely,

Richard Cowser
(SOS Conservation Manager)
