Subject: 2018-149 HER Search for Land South of Grevatts Lane, Climping
Attachments: 2018-149_HER_Data.zip

Dear Matthew,

1km Radial Search centred on NGR 498731 101395, Land south of Grevatts Lane, Climping

WSCC HER Reference Number: **2018-149. This number must be referred to in all correspondence and within any reports.**

Thank you for your enquiry requesting an Historic Environment Record (HER) search for Land south of Grevatts Lane, Climping.

Please find attached the shapefiles, maps and reports that are within a 1km radius of NGR 498731 101395, as requested for the study area. The shapefiles are to be used for this project **only**. This information contains data from the HER database and the following archaeology and historic conservation datasets:

- HER database entries: The 1km search produced **13** HER records and **2** event/activity records. These are detailed in the pdf documents. Due to the number of entries within the search some sites may have more than one HER entry shown on the accompanying map, and entries in close proximity may overlap.
- Archaeological Notification Areas: These areas are purely for identifying where there is a likelihood of archaeological work being necessary. Please be advised that these areas are part of an alert system to local planning authorities which are based on known archaeological finds/historic assets. They should not be taken as comprehensive or an exhaustive analysis of areas of archaeological potential where field work and research have not hitherto been undertaken. Some areas may be expanded from known designated assets and others are based on non-designated assets, where experience has shown that archaeological sites and features etc. can come to light in areas where no features have previously been known. They are not to be used as an indicator for archaeological potential and they do not short circuit the need for a Desk Based Assessment as identified in the National Planning Policy Framework paragraph 128. They do not have any legal status.
- Historic Landscape Characterisation (HLC): The supporting documentation for the Historic Landscape Characterisation is available on the West Sussex County Council website:
http://www.westsussex.gov.uk/living/planning/the_county_plan/west_sussex_character_project/historic_land_scape.aspx

There were no Listed Buildings, Scheduled Monuments or Registered Parks and Gardens within your search radius.

West Sussex County Council will not provide analysis or interpretation of the HER information.

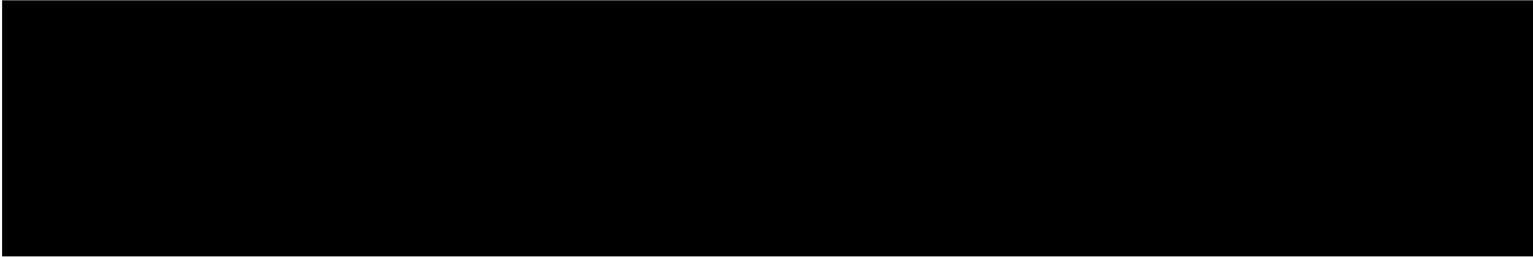

A request made for additional information for a completed search i.e. a change of search radius/area or inclusion of data that was previously excluded at the request of the enquirer, will be classed as a new search and would be subject to further charging.

A copy of this email, including your HER reference number, together with any attachments and the associated plan showing the extent of the site on which the search was based, should be submitted to Arun District Council with your application.

Please note that in providing this information no judgment has been made as to the necessity for, or scope of, any further statement which may be required to meet the validation requirements of Arun District Council, nor has any judgment been made as to any possibility of the need for archaeological mitigation. You are advised to consult Arun District Council's Local Validation Requirements for further guidance.

Your WSCC HER Reference Number is: **2018-149**.

Best wishes,
Rachel

Arun 039

Name: Multi-Period Site at the Disused Ford Airfield and Ford Open Prison, Ford

Grade: Amber **Date Assigned:** 25/09/2013 **Amended:** 17/02/2016 **Revoked:**

Legal Description

Ford Airfield, opened 1918 and closed 1958. During World War Two the airfield was part of 11 Group Fighter Command. By 1944 it was equipped with two tarmac runways and a variety of aircraft hangars including Bellman and blister types. Now in use as HMP Ford.

Excavations carried out at the Former Ford Airfield identified activity dating from the Prehistoric and Bronze Age to Roman period including large numbers of Mesolithic, Neolithic and Bronze Age burnt and worked flint with a concentration in one area suggested a truncated Mesolithic land surface. There were also Bronze Age/ Iron Age ditches, a substantial Bronze Age post hole containing two flint flakes. A Late Bronze Age terminal end of a gully or a posthole was identified with deliberately placed or dumped pottery and circular features on a curved alignment were interpreted as postholes for a possible Bronze Age roundhouse. A modern "bullet trap" in connection with the nearby world war 2 aerodrome was identified.

Land rear of the "Oystercatcher", Crookhorn Lane, Climping, West Sussex

Description and Sources**Description**

Multi-period site containing a middle-late Bronze Age inturned cremation, a late Bronze Age rubbish or funerary pit and a possible Romano-British field/boundary ditch. {1} {2} {3}

An archaeological evaluation was carried out on Land to the rear of the "Oystercatcher" Public House and Restaurant, Climping in advance of upgrading and restructuring of the land. Fifteen trenches were mechanically excavated totalling 370m in length. Three firmly dated features were identified: a Middle-Late Bronze Age urned cremation, a Late Bronze Age rubbish or funerary pit, and a Late Iron Age/early Romano-British perhaps field/boundary ditch. A further eight ditches, one pit and four possible post-holes were also identified, the majority of which were interpreted as dating to the Romano-British period or earlier.

Based on the results of the evaluation, it was proposed that a limited excavation should be carried out in two targeted areas A and B plus a contingency area of 20m x 20m; a watching brief in a third area was also proposed. Initially, a total of twelve features were identified in Area A and 28 in Area B, including four features recorded and sampled during the evaluation stage. The contingency was then used to extend Area A to the west and Area B to the east. A further eight features were revealed in Area A and a further nine in Area B.

Area A: Two Late Bronze Age ditches were identified that formed the south-eastern corner of a probable enclosure that would have extended to the north and west. Two short elongated features possibly represent the position of a barrier or gate of this enclosure. A right-angled ditch extended southwards from the possible gateway, turning to the east and possibly continuing to form further field systems. A post hole and an irregular feature lay either side of this ditch and are possibly associated to it. Two large circular pits lay just within the proposed enclosure. Two small post holes and two associated features containing stake holes also lay within the enclosure.

At the north-eastern end of the site were three isolated features: an oval pit, a large tapering pit and a depression. The function of these features is unclear.

A large sub-rectangular feature measuring c. 3.2m x 3.6m and c. 250mm deep, was identified. This is believed to be a Saxon Sunken Featured Building or Grubenhaus. Five small pits were located within the floor of the SFB, together with at least 22 stake holes. A narrow north-south gully lay just to the east of the SFB with a tributary gully and four stake-holes at its northern end. Immediately to the east of gully lay a 630mm deep steep-sided pit with a probable post-hole at its south-western end. The gully may represent a screen or barrier between the SFB and pit.

Area B: A Bronze Age unurned cremation containing a large quantity of fire-cracked flint, pieces of worked flint, charcoal and a small quantity of calcined bone was identified. Two pits contained significant quantities of burnt material and were probably pyre deposits. Immediately beside these two pits were two post-holes that perhaps represented the position of marker posts.

A Bronze Age ditch crossed the site from south-west to north-east and perhaps represented an element of a field system or marked a land division. A 3 metre wide interruption in the ditch was probably for access. A large piece of saddle quern was centrally placed in the ditch terminal accompanied by a fragment of copper-alloy axe. A post hole was identified in the proposed accessway and was perhaps related to a gate or barrier to control access.

Three possible "working hollows" and a group of small pits/post holes were perhaps associated with the postulated occupation area. An associated rubbish pit was also identified.

An Iron Age / Late Iron Age double ditch delineated a c. 2m wide trackway or driveway that crossed the site from south-west to north-east. These ditches were also recorded in evaluation trench 9, c. 90m to the north-east. To the west of one of the ditches, lay a large depression cut by two perhaps natural channels. A ditch ran into the depression from the west but could not be traced to the east. The depression lay within a very silty area that may have been formed by the trampling of stock, particularly by cattle at an access area to the driveway, or was perhaps by a small natural pond.

17 further features were recorded, including post-holes, gullies, a pit containing a post-hole and five lobate features. These features were probably prehistoric.

Twenty-Six bulk samples were taken. Four samples were fully processed and 22 samples were sub-sampled.

The samples contained small quantities of grains and legumes. However, poor preservation makes further identification impossible. There were no assemblages suggesting specific functions for the features. The charred and uncharred seeds are typical of wasteground, arable and grassland. {4}

MWS6771	Bognor Regis & Littlehampton Transfer Pipelines - Segment 23 (& Trench 4)	Monument

Monument Types and Dates

DITCH (Roman - 43 AD to 409 AD)

Description and Sources

Description

3 later Roman ditches were excavated within a 50 m trench (ahead of the cutting of the pipeline trench). A wide palaeochannel containing later Roman pottery in its upper fills was identified adjacent to the ditches. The watercourse is likely to have been a tributary of the Ryebank Rife and may have influenced the siting of the adjacent Roman site. Finds included much Roman pottery, a sherd of early Saxon (or possibly late Iron Age) pottery, a sherd from a middle Iron Age 'saucepan pot', bone fragments, a fragment of burnt stone (from an oven or hearth?), a third of a Roman rotary quern stone, a fragment of a keyed box flue tile, a fragment of 1st-4th century Roman floor tile and a fragment of amphora handle.

DITCH (Prehistoric - 500000 BC to 42 AD)

BURNT MOUND (Bronze Age - 2350 BC to 701 BC)

Description and Sources

Description

Finds from stripped topsoil: possible flint core, 5 burnt flints, frag of post-Medieval tile, and a sherd of modern pottery. Excavation of an area of dense burnt flints with charcoal flecks (2.0 x 1.6 m), interpreted as a burnt mound, produced fragments of burnt clay with 2 worked flints of probable Bronze Age date. This overlaid a possible linear feature, cut into the natural, which contained 3 frags of burnt flint and was interpreted as a ditch of probable prehistoric origin. (1)

Description and Sources

Description

Fifteen trenches were excavated revealing three firmly dated features: a Middle-Late Bronze Age inurned cremation, an early Late Bronze Age possible rubbish or funerary pit, and a Late Iron Age/Early Romano-British field/boundary ditch. A further eight ditches, one pit and four possible post-holes were also identified with the majority interpreted as dating to the Romano-British period or earlier.

The only securely dated Bronze Age features consisted of an early Late Bronze Age pit and a Middle-Late Bronze Age inurned cremation or pyre deposit; a ditch produced a significant quantity of fire-cracked flint and worked flint may be dated to this period. Four nearby undated features, three post holes and a gully were perhaps broadly contemporary or associated.

This group of features constituted the only easily identifiable focus of archaeological activity on the site. Several shallow natural depressions produced quantities of Late Bronze Age pottery, charcoal and worked and fire-cracked flint and although this material had probably accumulated naturally its presence was a further indication of significant prehistoric activity on the site.

Only one probably Romano-British feature was identified: a possible drainage/boundary ditch that was perhaps an element of a field system.

A ditch, pit and post hole and a double ditch were undated although the stratigraphy suggested that all these features were probably Romano-British or earlier. Two other ditches were almost certainly not modern and were likely to be a post-medieval or earlier drainage ditch/boundary ditch. {1}

Based on the evaluation results it was decided that a limited excavation would be appropriate in two targeted areas. A total of 20 features were identified in Area A and 35 in Area B, including four features recorded and sampled during the evaluation stage.

Area A: Two phases of activity were identified - prehistoric and Saxon. No features contemporary with the Mid-Late bronze Age cremation were encountered. Two ditches, probably dating to the Iron Age formed the south-eastern corner of a probable enclosure that would have extended to the north and west. Two further ditches terminated to form a c.4m wide apparent access into the enclosure, with slots possibly representing the position of a barrier or gate across the access. A right-angled ditch extended southwards from the possible gateway, turning to the east and perhaps continuing to form an antenna ditch. Two large circular post holes were uncovered lying just within the possible enclosure that may have been associated with another phase of the access way and further features including post holes, slots and stake holes may represent light structures or sub-divisions within the enclosure.

A large sub-rectangular feature, measuring c.3.2m c 3.6m and 250mm deep, was almost certainly a sunken-featured building or Grubenhaus of Saxon date. Five small pits were located within the floor of the sunken featured building, together with at least 22 stake holes. A narrow north-south gully lay to the east with a tributary gully and four stake holes at its northern end. Immediately to the east of the gully is a deep, steep sided pit, possibly a latrine, with a probably post hole at its south western end.

Area B: At least three phases of prehistoric activity were represented - features relating to a Bronze Age(?) cemetery, elements of an Iron Age(?) field system with associated features relating to occupation, and a possible Iron Age track or droveway and associated features. A pit almost certainly containing an unurned cremation and fire-cracked flint, worked flint, charcoal and a small quantity of calcined bone was recovered with other pits containing significant quantities of burnt material and were probably pyre deposits. There were also two apparent post holes that may have represented the positions of marker posts. A ditch crossed the site from south-west to north-east and may have represented an element of a field system or marked a land division; a c.3m wide interruption was probably an access and a large piece of saddle quern centrally placed in the ditch terminal was possibly a structured deposition. Significantly, this ditch passed between the funerary features indicating that it belonged to a different phase of land use. A possible curving spur off ditch and four possibly associated post holes, three 'working hollows' and a group of small pits and post holes indicate to an occupation area. A double ditch delineated a c.2m wide track or droveway crossed the site, although on a different alignment to the ditch. A further 15 features were recorded comprising three post holes, five gullies, a pit containing a post hole and five lobate features. Although these features were probably prehistoric they cannot be meaningfully phased at this stage. {2}

An archaeological excavation was undertaken on land to the rear of the Oystercatcher public house, Yapton Road, Climping. A previous evaluation had identified a number of features dating to the prehistoric and Roman periods as a result a limited excavation was suggested.

The excavation was carried out in two areas. The first area was seen to contain two ditches of probable Late Bronze Age date which was thought to represent the probable corner of an enclosure. More ditches were also identified which were thought to have been part of a field system if Bronze Age date.

The same area was also seen to contain features dating to the Saxon period. A large sub-rectangular feature was thought to have been a Sunken Featured Building or Grubenhaus. Five small pits were also located within the SFB together with at least 22 stake holes.

A second area of the site was also excavated. Again features dating to the Bronze were identified with one showing possible evidence of Bronze Age cremation activity.

Another possible field system of Bronze Age date was also identified during the excavation within this area.

A double ditch and delineated trackway/droveway were of Iron Age date were also identified. {3}

An archaeological evaluation was carried out on Land to the rear of the "Oystercatcher" Public House and Restaurant, Climping in advance of upgrading and restructuring of the land. Fifteen trenches were mechanically excavated totalling 370m in length. Three firmly dated features were identified: a Middle-Late Bronze Age urned cremation, a Late Bronze Age rubbish or funerary pit, and a Late Iron Age/early Romano-British perhaps field/boundary ditch. A further eight ditches, one pit and four possible post-holes were also identified, the majority of which were interpreted as dating to the Romano-British period or earlier.

Based on the results of the evaluation, it was proposed that a limited excavation should be carried out in two targeted areas A and B plus a contingency area of 20m x 20m; a watching brief in a third area was also proposed. Initially, a total of twelve features were identified in Area A and 28 in Area B, including four features recorded and sampled during the evaluation stage. The contingency was then used to extend Area A to the west and Area B to the east. A further eight features were revealed in Area A and a further nine in Area B.

Area A: Two Late Bronze Age ditches were identified that formed the south-eastern corner of a probable enclosure that would have extended to the north and west. Two short elongated features possibly represent the position of a barrier or gate of this

HER Number MWS7709

Site Name Land rear of the 'Oystercatcher' Public House and Restaurant, Climping

enclosure. A right-angled ditch extended southwards from the possible gateway, turning to the east and possibly continuing to form further field systems. A post hole and an irregular feature lay either side of this ditch and are possibly associated to it. Two large circular pits lay just within the proposed enclosure. Two small post holes and two associated features containing stake holes also lay within the enclosure.

At the north-eastern end of the site were three isolated features: an oval pit, a large tapering pit and a depression. The function of these features is unclear.

A large sub-rectangular feature measuring c. 3.2m x 3.6m and c. 250mm deep, was identified. This is believed to be a Saxon Sunken Featured Building or Grubenhaus. Five small pits were located within the floor of the SFB, together with at least 22 stake holes. A narrow north-south gully lay just to the east of the SFB with a tributary gully and four stake-holes at its northern end. Immediately to the east of gully lay a 630mm deep steep-sided pit with a probable post-hole at its south-western end. The gully may represent a screen or barrier between the SFB and pit.

Area B: A Bronze Age unurned cremation containing a large quantity of fire-cracked flint, pieces of worked flint, charcoal and a small quantity of calcined bone was identified. Two pits contained significant quantities of burnt material and were probably pyre deposits. Immediately beside these two pits were two post-holes that perhaps represented the position of marker posts.

A Bronze Age ditch crossed the site from south-west to north-east and perhaps represented an element of a field system or marked a land division. A 3 metre wide interruption in the ditch was probably for access. A large piece of saddle quern was centrally placed in the ditch terminal accompanied by a fragment of copper-alloy axe. A post hole was identified in the proposed accessway and was perhaps related to a gate or barrier to control access.

Three possible "working hollows" and a group of small pits/post holes were perhaps associated with the postulated occupation area. An associated rubbish pit was also identified.

An Iron Age / Late Iron Age double ditch delineated a c. 2m wide trackway or droveway that crossed the site from south-west to north-east. These ditches were also recorded in

evaluation trench 9, c. 90m to the north-east. To the west of one of the ditches, lay a large depression cut by two perhaps natural channels. A ditch ran into the depression from the west but could not be traced to the east. The depression lay within a very silty area that may have been formed by the trampling of stock, particularly by cattle at an access area to the droveway, or was perhaps by a small natural pond.

17 further features were recorded, including post-holes, gullies, a pit containing a post-hole and five lobate features. These features were probably prehistoric.

Twenty-Six bulk samples were taken. Four samples were fully processed and 22 samples were sub-sampled. The samples contained small quantities of grains and legumes. However, poor preservation makes further identification impossible. There were no assemblages suggesting specific functions for the features. The charred and uncharred seeds are typical of wasteground, arable and grassland. {4}

Description and Sources

Description

Ancton Farm, Middleton-on-Sea, has been identified as a Historic Farmstead through the 'Historic Farmsteads and Landscape Character in West Sussex' Project. The project aimed to represent all farmsteads shown on the Ordnance Survey 2nd Edition 25" mapping of 1895.

Ancton Farm is a 19th century 3 sided loose courtyard farmstead with additional detached elements to the main plan. The farmhouse is detached and set side on to the yard. It is located within a Hamlet and is extant (no apparent alteration). {1} {2}

Possibly associated with the Listed Ancton House Hotel (DWS1497).

MWS14569	Felpham to Climping Cycle Path (A259) - Watching Brief	Negative Evidence

A watching brief was carried out during the construction of a new cycle path immediately north of the A259. However, due to the relatively shallow ground reduction and the presence of numerous services no archaeological finds or features were recorded.

Monument Types and Dates

Negative Evidence (Unknown date)

Evidence Survey

Description and Sources

Description

A watching brief was carried out during the construction of a new cycle path immediately north of the A259. The site is located immediately north of the stretch of the A259 road between Felpham and Climping. Two areas (originally three) along the length of the new cycle path were identified that had the potential for archaeological remains to be destroyed or damaged during groundworks. The underlying geology consists of Aeolian Deposits.

Archaeological Recording Area 2 was a narrow strip, measuring up to 3m wide and 246m in length. It was stripped of overburden down to the required level for the new cycle path. No archaeological finds or features were identified and it was clear that the area had been significantly disturbed in the past due to the presence of numerous service trenches, most of which ran parallel to the road. In those areas not affected by service runs, the natural Brickearth geology was not exposed due to the relatively shallow depth of the ground reduction.

Archaeological Recording Area 3 was a narrow strip, measuring 234m in length and was up to 3m wide. No archaeological finds or features were recorded, although several service trenches were identified within the stripped area. In the areas not affected by the service runs, the natural Brickearth geology was not exposed due to the relatively shallow depth of ground reduction.

Overall, due to the relatively shallow ground reduction and the presence of numerous services no archaeological finds or features were recorded during the watching brief. {1}
