## **1. Executive Summary**

- 1.1 The Housing and Economic Land Availability Assessment (HELAA) is a key component of the evidence base which informed the preparation for the Arun Local Plan (ALP) and keeping it up to date will inform future monitoring of land supply.
- 1.2 It is prepared in the summer and autumn of 2021 and informs both the AMR monitoring year 1<sup>st</sup> April 2020 - 31<sup>st</sup> March 2021 for the strategic assessment of land available for development and housing trajectories in order to calculate the future 5-year housing land supply, which is required by the National Planning Policy Framework 2021 (paragraph 68 and 74) with further guidance set out in the Planning Practice Guidance (PPG).
- 1.3 This version of the HELAA replaces one prepared in December 2020.
- 1.4 The HELAA presents a strategic picture of the availability and suitability of land within the Arun Local Planning Authority Area (LPAA) for development. Further, it attempts to establish realistic assumptions about the number of homes and amount of economic development that this land could yield and the timeframe within which this might come forward.
- 1.5 The HELAA report methodology is updated from time to time to accommodate changes in national policy (e.g. NPPF 2021) and the PPG. These changes impact on resources and timescale e.g. accommodating Parish/town Council stakeholder engagement in preparing the HELAA.
- 1.6 The HELAA assessment is important evidence used to inform plan making with regard to potential land availability, including high level assessment of designations and local and policy constraints to sieve out the most likely land choices for further testing via the plan making process and detailed evidence commissioning - and so represents a very high level starting point. The HELAA therefore, does not in itself determine whether a site should be allocated for housing development and

specifically it is recognised in national guidance that it should certainly not be interpreted down to Development Management level decisions.

- 1.7 The HELAA is therefore, considered together with a wider evidence base for monitoring the adopted Arun Local Plan but cannot be construed as committing the Council to allocate any particular parcel of land for a particular use, nor approve any application for development.
- 1.8 The HELAA is divided up into three sections: Introduction, Methodology and Detailed Site Assessments. Site proformas are contained within the appendices to this report.

## **2. Introduction**

- 2.1 The NPPF 2021 supported by guidance in the Planning Practice Guidance (PPG) requires Local Authorities to maintain an adequate supply of housing sites in their area. As part of this process, Local Planning Authorities must consider where housing development would be best located and assess all potential opportunities for development locations.
- 2.2 The Housing and Economic Land Availability Assessment (HELAA), is a technical study that determines the suitability, availability and achievability of land for potential allocation through a further plan making process. It is an important evidence source to inform plan-making, but does not, in itself, represent policy nor does it determine whether a site should be allocated for future development. Land allocations can only be made through the statutory Development Plan for Arun which includes the Adopted Local Plan 2018, all made Neighbourhood Plans and further plan making documents such as the Gypsy & Traveller Site Allocation Development Plan Documents.
- 2.3 This process was previously known as a Strategic Housing Land Availability Assessment (SHLAA), but has been renamed as the HELAA in order to reflect its ability to assess land for uses other than housing, such as employment. All sites that were considered as part of the previous SHLAA process were retained and carried forward into the HELAA to be considered in an up to date context.
- 2.4 This Housing and Economic Land Availability Assessment (HELAA) is the sixth housing land assessment document to be published. It is a rolling update to the initial SHLAA undertaken in 2009 and covers the areas of the district within the Local Planning Authority Area (LPAA). This document provides a brief introduction to the HELAA and policy background, as well as the findings of this HELAA update itself. The original methodology can be viewed on the Council's website ([www.arun.gov.uk](http://www.arun.gov.uk)).

- 2.5 The methodology for the assessment has been prepared in accordance with the latest planning practice guidance.
- 2.6 Whilst the HELAA is a key document, it is only one part of the extensive evidence base used to inform the preparation of the Local Plan. It is also important to understand that the HELAA:
- Does not allocate land for development and is not a statement of Council policy.
  - Does not outweigh or alter any existing policies or designations.
  - Highlights the potential of land across the LPAA for development;
  - Is not, and is not intended to be, a proxy for site allocations via the statutory 'Development Plan' for Arun; and
  - The assessment uses an agreed, objective and consistent methodology which seeks to capture information on constraints as they exist at a particular point in time.
- 2.7 The HELAA can be viewed on the Council's website. The online version takes advantage of interactive mapping to ensure that it is user friendly.

## **What is the HELAA?**

- 2.8 An assessment of housing land availability is required by the revised National Planning Policy Framework (NPPF 2021) in order to "enable strategic policy making authorities to have a clear understanding of the land available in their area" (para 68, NPPF 2021).
- 2.9 As part of this, Local Planning Authorities must assess all potential opportunities for development locations to consider where residential development would be best located.
- 2.10 The aim of the HELAA is to assist the Council in the identification of suitable sites for development to enable it to maintain an adequate supply of land to meet the identified objectively assessed (development) needs (OAN).

2.11 Therefore, the purpose of a HELAA is to:

- Identify sites and broad locations with potential for development;
- Assess their development potential;
- Assess their suitability for development and the likelihood of development coming forward (the availability and achievability).

[PPG Paragraph: 001 Reference ID: 3-001- 20190722, PPG].

2.12 This HELAA has a primary focus on housing potential, but includes economic sites including those which have submitted for housing development or those included in the previous Employment and Economic Land Assessment, the previous SHLAA or, have been previously assessed for economic use. This HELAA does not assess all identified economic sites in the district. This may be addressed via other studies or changes to the future monitoring approach to land availability.

2.13 Sites assessed are identified as either:

- Deliverable (Suitable, Available and Achievable); or
- Developable (Suitable but either the availability is specified for a future date or is currently unknown, or the achievability of the site is unknown/marginal).
- Not currently developable – if a site is currently not considered suitable and/or it is not known when a site could be made available, it is neither suitable nor viable.

2.14 This HELAA report assesses development potential of those sites that have been submitted to the Council previously and through the 2021 'Call for Sites' process. The report presents the following key outputs – with the exception of windfall which will be reported in the Authorities Monitoring Report using the intelligence gained from the HELAA:

- Details of all sites submitted as part of the HELAA process, including their locations on a map;
- An assessment of the suitability of each site for development;

- A notional development capacity that could be delivered on each site assessed to be suitable;
- Information to assist the calculation of the potential windfall delivery of housing for the District (i.e. housing to be delivered within the Local Plan period on unidentified sites or on sites that fall below the minimum threshold included in the HELAA) via the Authorities Monitoring Report; and
- An indicative trajectory of anticipated development and consideration of associated risks, also via the Authorities Monitoring Report.

2.15 The Assessment is updated on a regular basis in order to reflect any changes of circumstance with individual sites (e.g. previously identified constraints to the delivery of a site have been removed). The housing trajectory will also be updated to reflect any such changes. Updates to the assessment will:-

- Survey new and amended sites
- Re-assess the deliverability and developability of sites (this may mean that the status of a site may change as part of a review).

## **Background Information**

2.16 The following section outlines the recent changes in the planning system and summarises the key pieces of local evidence that have informed the HELAA site appraisals in this update. The latter half of this section provides the Council's latest identified housing need.

## **Policy Context**

### **National Planning Policy**

2.17 The revised National Planning Policy Framework (NPPF 2021) sets out the Government's planning policy framework for England and how these policies should be applied. The NPPF 2018 states that the purpose of the planning system is to contribute towards the achievement of sustainable development.

- 2.18 The NPPF 2021 paragraph 8, outlines how sustainable development is achieved through three overarching and interdependent objectives: an economic objective, a social objective and an environmental objective. To ensure sustainable development is pursued in a positive way, a presumption in favour of sustainable development sits at the heart of the framework (NPPF 2021 paragraph 11). Local Plans should “as a minimum, provide for objectively assessed needs for housing and other uses, as well as any needs that cannot be met within neighbouring areas”. For decision-taking local planning authorities should approve development proposals that accord with an up-to-date development plan without delay and grant planning permission where the development plan is absent or out-of-date unless this would adversely impact on policies within the NPPF 2021 which protect areas and designated assets of particular importance or where adverse impacts significantly and demonstrably outweigh the benefits when assessed against the NPPF 2021 as a whole.
- 2.19 The updated NPPF 2021 introduces a more detailed requirement to test the status of sites (i.e. the definition of ‘deliverable sites’ in Annex 2 to the NPPF 2021) through land availability studies such as the HELAA.
- 2.20 The NPPF 2021 sets out components of delivering a sufficient supply of homes. One of the key components is the strengthening of the definition of ‘deliverable’. To be considered deliverable; *“sites for housing should be available now, offer a suitable location for development now, and be achievable with a realistic prospect that housing will be delivered on the site within 5 years”*. (Extract from NPPF).
- 2.21 National guidance still requires an assessment of site availability, suitability and likely economic viability to be considered. As part of this thrust on supply of homes, the Government places significant emphasis on securing a 5 year housing land supply (5yr HLS) using more robust evidence in order to ensure that housing policies are up to date and delivering housing targets. A further Housing Delivery Test (HDT) has also been introduced looking at an authority’s previous 3 years performance. Arun’s HDT result (61%), published by the Government in February 2021 requires the authority to publish an ‘Action Plan’ to ensure that barriers to

development can be identified and where possible, be overcome (and requires the application of a 20% buffer for the purposes of calculation a 5-year housing land supply).

- 2.22 The HELAA 2021 is consistent with current practice in support of the adopted Arun Local Plan July 2018. NPPF 2021 paragraph 74 states that an authority with a recently adopted Local Plan can defend its 5 year housing land supply with an appropriate buffer, for a year – i.e. in Arun's case this was up until 31 October 2019.
- 2.23 However, the published AMR 2019/20 only demonstrated a 3.3 year housing land supply. The current AMR 2020/21 is unable to demonstrate a 5-year or indeed a 3-year housing land supply. See section 2.37 of this HELAA for information about steps the Council is taking to proactively help to boost housing supply (including those set out in the 'Housing Delivery Test Action Plan published in July 2021).
- 2.24 Paragraph 74 of the NPPF 2021 sets out a requirement to ensure that local authorities set out a housing trajectory on the rate of delivery for the plan period and consider whether this is appropriate for sites and annually update a supply of 'specific deliverable' sites (with an appropriate buffer) sufficient to secure a 5 year housing land supply, and also identify 'specific developable' sites.
- 2.25 In March 2014 the Government published the Planning Practice Guidance (PPG). This document replaced a number of Circulars and Planning Practice Guidance, including the 2007 Strategic Housing Land Availability Assessment Practice Guidance. The Housing and Economic Land Availability Assessment<sup>1</sup> section of the PPG provides guidance on undertaking land assessments.
- 2.26 The PPG recommends that housing and economic evidence should be undertaken as part of the same exercise. Therefore, in 2014 ADC officers merged the database of sites from the SHLAA (updated in 2012) and the Employment and

---

<sup>1</sup> <http://planningguidance.communities.gov.uk/blog/guidance/housing-and-economic-land-availability-assessment/what-is-the-purpose-of-the-assessment-of-land-availability/>

Economic Land Assessment (2010) to create the Arun Housing and Employment Land Availability Assessment (HELAA).

- 2.27 The most up to date guidance on the preparation of a HELAA is contained within the PPG which suggests a site size of 5 or more units. The Council's historic HELAAs have applied a threshold of 6 or more units, however, the threshold of 5 or more units as has been applied for the most recent publications of the HELAA.
- 2.28 In line with the PPG, this update incorporates an increased emphasis on economic land by drawing out, from the assessment of suitability of sites for housing, whether mixed use opportunities might exist.

### **Local Planning Policy**

- 2.29 Arun District Council's local planning policies currently consist of the adopted Arun Local Plan 2018 (ALP 2018) which covers the 20 year period 2011-2031. The ALP 2018 was adopted by Full Council in July 2018. This plan replaces the Arun Local Plan 2003 and any saved policies for the Arun local planning authority area (i.e. that part of Arun District which falls outside the South Downs National Park). The ALP 2018 sets out a strategy for meeting its housing and employment needs as well as some unmet needs from neighbouring authorities, over the twenty-year period providing a framework for growth and regeneration.

### **Evidence Base**

- 2.30 The HELAA is used as part of the evidence base for planning policy documents and policy formulation, including the ALP 2018. There are a number of evidence base documents that also help to inform policy formulation, particularly those that consider strategies for the planning of new housing. Such documents include a Transport Study, Landscape Study, Sustainability Appraisal and an Infrastructure Delivery Plan. As a consequence, the findings of the HELAA need to be tempered against the findings of other evidence base documents when considering future

housing potential. For example, the HELAA only assesses individual sites, whereas transport and infrastructure studies may consider the cumulative impact of potential developments. Therefore, whilst one particular settlement may seem to have significant potential for housing growth, based solely on HELAA findings, other evidence may paint a different picture of how much of that potential is suitable and deliverable.

- 2.31 In addition, it should be noted that evidence-based documents prepared and held by the Council have been utilised in helping to come to conclusions on the status of HELAA sites.

### **HELAA Update**

- 2.32 The HELAA should be reviewed and updated on an annual basis in order to ensure that the information contained within it is as accurate as it can be. As a consequence, the Council has undertaken a review of the HELAA in 2021.
- 2.33 The update has enabled the Council to identify and assess new sites and broad locations (as well as review/update data regarding existing HELAA sites) to identify which are 'deliverable', 'developable' or 'not currently developable' for housing and employment development. Please also refer to the above Policy Context section on the changes recently introduced by the NPPF 2021 in relation to the definition of 'Deliverable' and further recent updates on PPG, on applying the definition. The HELAA update form and Call for Sites forms were both updated in 2019 to reflect these changes and to allow the Council to capture accurate information on the sites in the HELAA.
- 2.34 The preparation of an updated trajectory for the delivery of sites is also crucial to ensure that the Council can test the delivery of a five-year supply of deliverable sites against the Council's housing requirements. The AMR 2021 sets out the baseline land-use monitoring statistics (e.g. housing completions and commitments) retrospectively (1<sup>st</sup> April 2020 to 31 March 2021). However, for the purposes of calculating the five-year housing land requirement (with a 20% buffer and shortfall)

the five years looking forward cover the period 1<sup>st</sup> April 2021 to 31 March 2026. It should be noted that this year the AMR 2020/21 will show only the five -year calculation for the Government's Standard Housing Methodology (SHM) 'local needs figure'. The reasons for this are set out in the AMR and relates to the Council's decision update the material housing policies in January 2020 which means that they are deemed to be out of date.

- 2.35 The 2021 HELAA, therefore, replaces all previously published land availability assessments.

### **Consultation and Call for Sites Exercise**

- 2.36 As part of the update to the HELAA, the Council undertook a general 'call for sites' in June/July 2021, in which landowners and developers were able to promote any new sites within the District that can accommodate 5 or more additional dwellings for inclusion within the HELAA.
- 2.37 The Council also asked (using the HELAA update proforma) all those who have previously had some involvement with land within the existing HELAA, be that landowner, site promoter, a previous applicant or agent, to review their site information and provide the Council with an update of any relevant site trajectory and other information. This would update the Council's records and help the Council assess whether a site could be considered to be achievable, available or deliverable. In addition to the HELAA call for sites, this year the Council published the 'Interim Housing statement' February 2021 aimed at inviting applications on any suitable and sustainable sites that may adjoin the built up area boundaries in order to help boost housing supply. In addition, the Council carried out consultation with 24 owners/developers/promoters of strategic sites (those with or without outline planning permission) to obtain better insight into the barriers stopping delivery and any potential solutions, including inviting signed Statements of Common Ground.
- 2.38 The HELAA update form was provided in both paper and electronic format. In an attempt to contact all of the landowners in the HELAA, letters were sent out

requesting that the existing information held about the sites should be reviewed, particularly since the form was significantly updated to reflect the changes in definition for deliverable sites in 2019.

- 2.39 A good level of responses was received as a result of the call for sites exercise. The results have provided greater evidence on deliverability and fed into the final version of this report. Responses were received from a variety of sources including Town and Parish Councils, key stakeholders, local groups and residents, along with landowners, agents and developers. As a result of the exercise, an additional 19 new sites were added to the HELAA appraisal.

## **Identified Housing Need for Arun District**

- 2.40 The Adopted ALP 2018 contains an OAN of 919 dwellings per annum (based on the Updated Housing Needs Evidence GL Hearn 2016).
- 2.41 The Local Plan makes appropriate provision for that figure, however, the final adopted policy target is 20,000 dwellings (1,000 dwellings per annum) over 20 years which takes account of the OAN and also some unmet housing need arising from neighbouring authorities (i.e. Worthing, Chichester and South Downs National Park authorities) to meet the Duty to Cooperate.
- 2.42 The ALP 2018 sets out a target allocation of 1,250 dwellings for delivery via either a Non-strategic Sites Development Document or Neighbourhood Plans or both. The HELAA will provide an important source of evidence on potential land supply information to aid such plan preparation. However, within the monitoring year (1 April 2019 – 31 March 2020) Arun District Council resolved (15 January 2020) to update the Arun Local Plan 2018. This is in order to address housing delivery (triggered by underperformance over two consecutive years) against the plan's housing trajectory, in addition to responding to the Government's published Housing Delivery Test results for Arun in 2018 and 2019. Further, the authority declared a 'Climate Change Emergency' and the aspiration to deliver an authority zero-carbon target by 2030 and need for a policy review which will require significant uplift in the

development plan's carbon reduction, decentralised/green energy and efficiency, climate mitigation and adaptation policies. Consequently, preparation of the Non-strategic Sites Development Document has been abandoned.

### **3. Important information and Caveats related to the HELAA**

- 3.1 The HELAA is an important evidence source to inform Plan making, but does not in itself determine whether a site should be allocated for housing or economic development or whether planning permission should be granted. The allocation of a site for development can only be made through the Development Plan Document (DPD) process and via Neighbourhood Plans (NP). The Plan making process (including the requirement for Sustainability Appraisal) will help to determine which suitable sites should come forward for development and for what level of development.
- 3.2 Although sites can only be allocated through the DPD and NP process, planning applications on such allocations must still be determined via the Development Management process and satisfy planning requirements or otherwise be refused.
- 3.3 The inclusion of a site within the HELAA does not preclude it being developed for other uses.
- 3.4 The HELAA is not the Council's last word in respect of site analysis for Development Management or site allocation purposes. Due to the scope of the HELAA, the Council has not assessed every site to the extent that would be required to support a planning application or make an allocation. The resource implications are too great. It can provide a view on suitability and capacity based the strategic level of analysis undertaken, which is proportional to the primary task of the HELAA, which is to assist in local plan-making and to evidence, broadly speaking, what the district might be able to achieve in respect of growth and the options for where growth can go.
- 3.5 The assessment and conclusions of sites may be subject to change over time, for example site boundaries may change, constraints may be overcome / mitigated or additional constraints identified, likely timescales may change, along with site capacities.

## **4. Monitoring and Updating the HELAA**

- 4.1 The HELAA is a live document and it is important that it is monitored and kept up to date so that it is a useful resource for the Council. As a result, it has been incorporated into the ALP 2018 monitoring framework and will be monitored annually in accordance with the PPG.
- 4.2 The main information that shall be monitored is as follows:
- Progress with delivery of development on allocated sites and sites with planning permission;
  - Planning applications that have been submitted or approved on sites and broad locations identified by the assessment;
  - Progress that has been made in removing constraints on development;
  - Unforeseen constraints that have emerged which means a site is no longer deliverable or developable, and how these can be addressed;
  - Evidence to support the assessment set out in the Authorities Monitoring Report whether the windfall allowance is coming forward as expected, or may need to be adjusted.
- 4.3 Sites submitted to the Council following the cut-off date for the HELAA assessment, will be considered as part of the next HELAA review.
- 4.4 If any member of the public, developer, landowner/agent or Parish Council or other organisation has any further information they would like to submit in relation to a site already within the assessment (including factual errors), this material should be passed to the Council via the update form which can be found on the website (<https://www.arun.gov.uk/helaa-brownfield-land-self-build-registers>).
- 4.5 Information related to potential new sites for inclusion in the HELAA, should be sent to the Planning Policy and Conservation Team, via the 'Call for Sites' form on the Council's website [here](#). These sites will be considered as part of the next review.

- 4.6 Following the publication of this report, the next review of the HELAA is scheduled for publication late 2022 / early 2023. The cut-off date for the submission of new site information will be made available on the Council's website.

## **5. Structure**

- 5.1 Due to the nature of the topic covered, the HELAA is divided up into a number of sections/parts:
- 5.2 Part one: Introduction.
- 5.3 Part two: Methodology – this identifies the methodology prepared in the topic paper dated May 2016 (as amended to accord with national policy and guidance). See sections on Policy Context and HELAA Update for information on recent changes to national policy and on the definition of ‘Deliverable’ sites.
- 5.4 Part three: Site assessment information (this will also assist the Authorities Monitoring Report (AMR) in calculating windfall performance and housing delivery trajectories).
- 5.5 Appendices: Detailed site assessments – this part contains information related to each of the sites assessed. The site assessments are reported by their status: deliverable, developable and not developable.
- 5.6 The report presents the following key outputs:
- Details of all sites submitted as part of the HELAA process, including their locations on maps;
  - An assessment of the suitability of each site for development; and
  - A notional development capacity (informed by the Arun Local Plan Viability Study 2016) that could be delivered on each site assessed to be suitable.

## **6. Methodology**

### **Establishing a Methodology**

- 6.1 The HELAA methodology which was established in 2016 and has been used for the subsequent HELAAs, has now been updated for this HELAA.

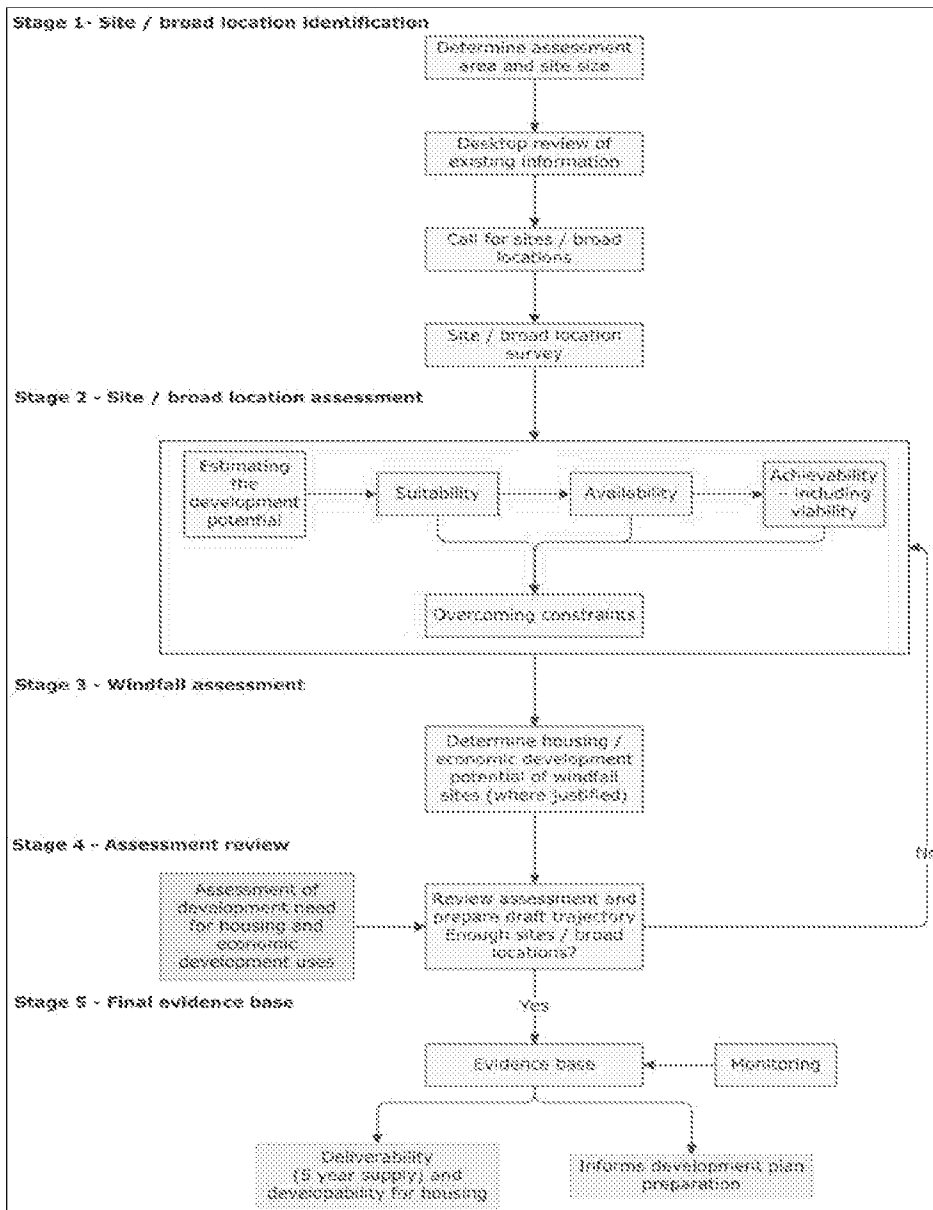

### **The Process**

- 6.2 The adopted methodology sets out a 5-stage approach, based on the approach identified in the PPG, for undertaking the HELAA. It is recognised that the NPPF 2021 introduces new requirements (see National Policy Context sections below) for the HELAA. The HELAA 2021 methodology is therefore, consistent with the NPPF 2021 and addresses the requirements of the revised definition of ‘specific deliverable sites’ and revisions to the relevant PPG 2014 guidance. The agreed methodology is therefore as set out below:

1. Site identification;
2. Site assessment;
3. Windfall assessment;
4. Assessment review; and
5. Final evidence base.

- 6.3 The above approach has been followed and the various stages have been addressed in the subsequent sections of this report. See sections on Policy Context and HELAA Update for information on national policy and the definition of ‘Deliverable’ sites and how this will be accommodated.

6.4 The entire process is summarised in the flow chart on the following page.

Source: Planning Practice Guidance

6.5 The following paragraphs provide a summary description of the methodology stages outlined above, followed in preparing the HELAA 2021 update.

## **Stage 1: Identification of sites and broad locations**

### **Geographical Scope**

- 6.6 The HELAA has been undertaken at a district level. The assessment area will cover that of Arun District Council Local Planning Authority Area, which does not include that area of Arun District which falls within the South Downs National Park.

### **Site Size/Threshold**

- 6.7 The PPG states that all sites capable of delivering five or more dwellings should be considered as part of the assessment, but that plan makers may wish to consider alternative site size thresholds.
- 6.8 Any site considered to have an estimated yield falling below the threshold of 5 dwellings and 0.25ha (or 500m<sup>2</sup> of floor space) for economic development, has been excluded from the assessment (PPG Paragraph:009 Ref ID:3-009-20190722).

### **Timescales**

- 6.9 The HELAA is based on the period covered by the adopted ALP 2018 which runs from 2011 to 2031. Therefore, the HELAA will include sites that have planning permission and are being constructed but still have phases for construction planned over the next few years. The HELAA will also include sites which may not be suitable, available or achievable at this time, but may be developable towards the end of the plan period. This will be reflected in the yield section of the HELAA.

### **Land designations**

- 6.10 Within the Arun LPA area there are some clear intrinsic designations where development (housing or employment) would be unsuitable, so these areas have been excluded from the assessment.

6.11 Sites falling within or covered by the following nature conservation designations have been excluded from the HELAA:

- Special Protection Areas (SPA)
- Special Areas of Conservation (SAC)
- Ramsar sites
- Sites of Special Scientific Interest (SSSI)
- Regionally important geological and geomorphological sites

### **Other designations**

6.12 Other important designations for consideration within the HELAA are:

- Flood zone 3b
- Open space
- Ancient woodland
- Sites of Nature Conservation Interest (SNCI),
- Nature reserves,
- Historic parks and gardens, Scheduled Ancient Monuments (SAMs)
- Local Green Space

6.13 The Government's Planning Practice Guidance (as updated) sets out that residential development should be considered for a minimum of 100 years (unless there are good reasons not to) with respect to flooding and climate change. The Council's Strategic Flood Risk Assessment (SFRA) evidence in support of the adopted Arun Local plan 2018 provides this evidence in support of applying the sequential and exceptions test when assessing potential sites to allocate. The climate change 100 yr flooding contour has been considered in relation to HELAA sites to identify those sites which may be affected by this constraint. Where the climate change 100yr flooding contour affects a site, it could potentially reduce the housing yield for the site, risking viability and achievability e.g. creating an island effect in term of safe access or preclude the site through the sequential and exceptions test. The HELAA has taken a necessary high-level view and assessed sites to be NCD where they are materially and significantly impacted and this will

shape which sites should be looked at preferably for plan making purposes – it must be emphasised, the HELAA is not a development management tool for decision making. The net effect of the closer alignment of the methodology with the PPG is that broadly Arun is a district with a significant level of environmental and flood related constraints including policy and infrastructure constraints – which have indicated that potential housing land supply is less than in previous years. This may evidence limits to growth and sustainable development capacity. At the same time, the evidence may shape development strategy and help in re-evaluating locations to determine if identified constraints can be overcome through mitigation and potentially where difficult policy choices may be necessary when plan making to meet identified needs - and will also inform the duty to cooperate on cross boundary matters.

- 6.14 Although development in those locations significantly affected by climate change flood risk is not preferable, when the sequential test is applied and there are no alternative preferable sites, it may, in some instances, be possible to appropriately mitigate adverse impacts through development design. See Government guidance Flood risk assessment: the sequential and exceptions tests for applicants: - <https://www.gov.uk/guidance/flood-risk-assessment-the-sequential-test-for-applicants>. However, this is beyond the scope and purpose of the HELAA and strays into Development Management policy and site level Flood Risk Assessment.

### **Identifying New Sites and Broad Locations**

- 6.15 A general call for sites, was held in June/July 2021, in order to ask consultees to provide updates on each of the sites and to identify whether there are any sites which should be added to the HELAA. The call for sites was advertised on the Council's website as well as a public press notice (see also section 2.38 above on the other proactive measure undertaken by the council to boost housing supply and delivery).
- 6.16 In addition to the HELAA call for sites exercise, the Council also undertook an exercise to identify new sites through a desktop review of data covering the Local

Planning Authority area. Data sources for such desk top reviews may include the following:

- ‘Made’ Neighbourhood Development Plans
- Planning application records including unimplemented, withdrawn and refused
- National register of public sector land
- Empty property register
- English House Condition Survey
- Valuation Office database
- National Land Use Database
- OS maps and Aerial photography
- Business enquiries for land, active engagement with sector.
- Active engagement with local landowners
- Previously rejected sites

### **Neighbourhood Development Plans**

- 6.17 There are currently sixteen ‘made’ Neighbourhood Development Plans across the district. Each housing allocation within the plans has been included in the most up to date version of the HELAA.
- 6.18 When a site has been allocated in an NP, there is a strong level of certainty that the site will be delivered.
- 6.19 As part of the desktop exercise, sites which were considered as part of the Neighbourhood Development Plan processes but rejected at Examination stage, or even prior to that stage, will be included in the HELAA and reassessed.

### **Greenfield/Previously Developed Land**

- 6.20 The identification of sites for inclusion within the HELAA will include both greenfield and brownfield land which could be improved or intensified. Where a site has

particular development constraints, these will be clearly documented together with a description of how these could be overcome, if appropriate.

- 6.21 Whilst policies within the ALP 2018 seek to make optimal use of land within the built up area boundaries of existing settlements, it is not possible to accommodate all future development within these boundaries. There will be greenfield sites which lie on the urban fringe of the main towns and villages which will need to be considered for future planning purposes (see also section 2.37 above on the other proactive measure undertaken by the council to boost housing supply and delivery). In these cases, consideration will be given in particular to landscape, biodiversity enhancement, woodland management, recreation provision, and flooding and access routes, including the Councils 'Interim Housing Statement' published in February 2021.

## **Employment Land**

- 6.22 With regards to employment land, an important data source to be used to check/update the baseline data, and to add new employment sites is the Commercial and Industrial Land Assessment (CILLA) data provided by WSCC on an annual basis. The CILLA provides data on all employment sites of 50sqm+ which are committed, available or in course of erection<sup>2</sup>. The Authority Monitoring Report also includes data on the available commercial sites available and completed.

## **Additional Data**

- 6.23 Since April 2015, the Council has collected data on care homes under use class C2 which will provide useful data to input into the HELAA as part of the identification of committed/deliverable sites.

---

<sup>2</sup> The data provided for the CILLA includes sites .50sqm floor area of new or change of use to any of the following: A1, A2, B1, B2, B8, D2, C1 hotel if more than 25 rooms.

## Submitted Sites

6.24 Submitted sites include those submitted to the Council by an external body such as a landowner, agent or Town/Parish Council. Information was collected via a Call for Sites form, available to download from the Council's website.

6.25 Table 1 summarises the type of information collected for each site.

<b>Table 1: Information to be collected and stored for each site.</b>	
Site Characteristics	Site Size
	Site Boundaries and location
	Current land use(s)
	Surrounding land use(s)
	Character of surrounding area (i.e. rural, urban etc)
Constraints and ways to alleviate them	Physical constraints, e.g. access, contamination, topography, flood risk, natural features of significance.
	Environmental constraints
	Planning Policy Constraints, e.g. designations, landscape issues
	Infrastructure constraints, e.g. impact on highways, access to the site, proximity to public transport
Development Progress	Ground works complete/ homes started / site built out
	Total number of units proposed/permitted
	Units built
Suitability and Deliverability	Assessment of whether the site is suitable for housing, including where applicable as part of a mixed use development.  An assessment of land preparation costs

	An assessment of viability and deliverability A summary of land ownership/ control of site
	Likely timescale for commencement of development Identification of barriers to development and how they can be overcome

## Broad locations

6.26 Broad locations are wider areas, identified to have characteristics for accommodating housing developments, but where not all potential sites may have been identified.

6.27 The advantage of identifying broad locations is that it gives communities an idea of where future development may be directed and it will provide developers with a greater degree of certainty about where development may be encouraged. It is a proactive approach to planning, which reflects positive choices about the direction of future housing developments, rather than a reactive approach to development opportunities as they arise. Examples of broad locations include those:

- **Within or adjoining settlements** – for example, areas where housing developments are, or could be, encouraged and small extensions to settlements; and
- **Outside settlements** – for example, major urban extensions, growth points, growth areas, new free-standing settlements.

## Stage 2: Site/Broad Location Assessment

### Calculating Development Potential

6.28 The housing potential of a site refers to the net number of dwellings that the site can be assumed to accommodate through its development or through conversion of existing buildings.

6.29 The HELAA had taken a relatively simplistic approach to modelling<sup>3</sup>, based on an assumption of 30 units per hectare (ha). In reality the density will vary relative to the size of the site and the amount of open space. Therefore, rather than simply apply the 30 units/ha used in the HELAA the following densities have been used (based on the advice contained within the Arun Viability Study, 2016).

<b>Residential Development Densities Units/ net ha</b>	
Smaller villages and other locations	30
Modern Estate Housing	32
Main Settlements and large villages	35
PDL in urban area	45
Urban Flats	75

Source: Local Plan Viability Assessment Update, HDH (July 2016)

6.30 In addition, the following net developable areas have been identified, which have influenced the final suggested yield of each site. With this in mind the following assumptions have now been used in the modelling:

<b>Residential Net Developable Areas</b>	
up to 0.4ha	100%
0.4 – 2ha	80%
2 – 5ha	70%
5ha+	60%

## Build Out Rates

6.31 The HELAA has taken a pragmatic approach and made an assumption on build out rates largely dependent on the amount of dwellings that the development of a site could yield. The assumption used is for 50 dwellings a year (on average) associated

<sup>3</sup> As set out in paragraph 8.2 of the Housing and Economic Land Availability Assessment (HELAA) Draft Mid Examination Topic Paper and HELAA Update Methodology May 2016

with an independent means of access to the site. It is recognised that in the first year that completions are expected, the build out rate may be slower as development may have only occurred for part of the year.

- 6.32 This approach has been taken to ensure that a consistent approach is followed for all sites.
- 6.33 It should be noted that the Assessment does not pre-empt or prejudice any planning decision made in the future on any particular site and the assumptions made on densities or indicative yields should not be taken outside of the context of the HELAA.

#### **Factors to be considered when assessing whether sites or broad locations are likely to be developed**

- 6.34 As set out above, paragraph 74 of the NPPF 2021 requires “*Local planning authorities should identify and update annually a supply of specific deliverable sites sufficient to provide a minimum of 5 years’ worth of housing against their housing requirement set out in adopted strategic policies.*” ....and also “(a) *specific, deliverable sites for years 1 to 5 of the plan period* 34 ; and (b) *specific, developable sites or broad locations for growth, for years 6-10 and, where possible, for years 11-15 of the plan.*” for housing over the longer term (Para 68, NPPF 2021).
- 6.35 Annex 2: Glossary, of the NPPF 2021 provides the following definitions for deliverable and developable sites:-
- 6.36 “**Deliverable:** To be considered deliverable, sites for housing should be available now, offer a suitable location for development now, and be achievable with a realistic prospect that housing will be delivered on the site within 5 years. In particular:-

a) sites which do not involve major development and have planning permission, and all sites with detailed planning permission should be considered deliverable until permission expires, unless there is clear evidence that homes will not be delivered

within 5 years (for example because they are no longer viable, there is no longer a demand for the type of units or sites have long term phasing plans).

b) where a site has outline planning permission for major development, has been allocated in a development plan, has a grant of permission in principle, or is identified on a brownfield register, it should only be considered deliverable where there is clear evidence that housing completions will begin on site within 5 years.”

6.37 **“Developable** – To be considered developable, sites should be in a suitable location for housing development with a reasonable prospect that they will be available and could be viably developed at the point envisaged.”

6.38 For sites assessed where it is unknown when a site could be developed, then it will be regarded as **‘Not Currently Developable’**, this could be, for example, because of severe constraints to development and not knowing when or if, they might be overcome.

6.39 The assessment criteria for determining whether a site is considered suitable, available or achievable is summarised below.

### **Assessing Suitability**

6.40 As per paragraphs 016 and 018 of the PPG which state that the estimation of the development potential of a site can be guided by the existing plan policy and national policy, the assessment of suitability has been guided by the ALP 2018 policies, ‘made’ Neighbourhood Plan policies and national policy. The assessment is still necessarily high level to comply with Government guidance on the methodology, in order aid plan making. To aid assement the Councils’ HELAA methodology boadly follows a decision tree (See Appendix 8) although this isn’t a comprehensive sieve against all plan constraints and policies and also allows room for context and site specific considerations. It should also be remembered that preparation of Nighbourhood Development Plans may use the HELAA but also develop more local based evidence and knowledge on site suitability and achievability and potential mitigation, such that a site may be proposed for

allocation but conflict with the high level HELAA assessment of the deliverability or suitability of a site. Even the best performing sites would then require rigorous further assessment and evidence before succeeding as an allocation through the plan making process (which includes examination). The HELAA is not therefore taken to a rigorous detailed policy level that would provide a robust development management standard for decision making. Market and industry requirements in the housing market or functional economic market area have also been considered.

6.41 The full suitability assessment assesses sites may consider the following criteria as necessary:

- Physical limitations or problems such as access, infrastructure, ground conditions, flood risk, hazardous risks, pollution, contamination
- Potential impacts including effect upon landscapes, nature and heritage conservation
- Appropriateness and likely market attractiveness for the type of development proposed (market appraisal)
- Contribution to regeneration priority areas (addressing emerging policy requirements)
- Environmental/amenity impacts

6.42 Sites with planning permission that are not major development will be considered suitable for development, as per paragraph 014 of the PPG. However, these sites will be checked to identify whether circumstances have changed which would alter their suitability.

### **Assessing Availability**

6.43 The Guidance considers a site to be 'available' for development when, on the best information available, there is confidence that there are no legal or ownership problems, such as multiple ownerships, ransom strips, tenancies, or operational requirements of landowners. Generally this means that the landowner has

expressed an intention to develop, or that it is in the control of a developer who has expressed an intention to develop.

- 6.44 The conclusions about site availability were informed by an assessment of the information provided during the Call for Sites process and/or engagement with the landowners.
- 6.45 A secondary issue to consider when assessing availability was the timescales required to overcome any identified constraints. In the majority of cases, sites included in the first five years are those with full planning permission or allocated and with a firm commitment (evidenced in a 2021 update and call for sites responses, or submitted application) by the developer to bring the site forward for development. If a constraint to development exists but it is felt that this constraint could be overcome in the longer term, then the site is classified as 'available' but deliverable in the longer term 6-10 or 11+ years, depending on the nature or complexity of the constraints on the site.
- 6.46 The availability of the majority of sites was established by contacting the developers / landowners and checking relevant planning history to help clarify the legal status. Where problems have been identified, an assessment was made as to how those problems could be realistically overcome. This was based upon details provided from the landowner(s), the expert judgement of Planning Officers based on local knowledge and information collected during site visits. In addition, if the background to a site shows a history of un-implemented permissions, then this has been taken into consideration when assessing deliverability.

### **Assessing Achievability for Housing**

- 6.47 The assessment of whether a site is achievable or not is based on a judgement about the economic viability of the site, coupled with the ability of a developer to complete the scheme within a given time period. The assessment of a site's *achievability* considers the following factors:

- **Market Factors** such as:

- Effect adjacent land uses may have on site
- The attractiveness of the locality
- Potential marketability of the site
- **Cost Factors** including:
  - Site preparation costs and/or exception costs
  - Affordable housing provision
  - Highways improvement works
  - Access issues and impact on Strategic Road Network
  - Third party land requirements
  - Availability and capacity of local utilities/ connection costs
- **Delivery Factors** including
  - An assessment of projected build out rates
  - Single or multiple developers
  - Size and capacity of the developer
  - Is third party land required?

6.48 For a site to be considered achievable, and therefore deliverable, there should be a 'reasonable' prospect that housing will be delivered on the site at a given point in time. In essence this is a judgement about the economic viability of the site and the ability of the developer to complete and sell housing over a certain period. If there is clear evidence that sites with planning permission will not be implemented before the permission expires, they should not be identified as achievable or deliverable.

6.49 As part of the Local Plan process, the Council commissioned an Affordable Housing and Viability Assessment which includes, in its brief, a viability appraisal to assess a sample of HELAA sites to establish site typologies in order to consider whether they would be economically viable when assessed against a range of development cost assumptions. These site viability typologies have been applied in assessing existing sites as well as those new sites added to the HELAA database and used to inform the final assessment of each site.

6.50 Each site in the HELAA has been assessed against the criteria above to determine whether it is suitable, available and/or achievable. The information is then used to

determine whether the site should be classified as 'Deliverable', 'Developable' or 'Not Currently Developable' for housing development.

### **Overcoming Constraints**

- 6.51 The PPG states (paragraph 021) that where constraints have been identified through the suitability, availability and achievability assessment, the consideration should be given to what action would be needed to remove them.
- 6.52 Where there are constraints on a site, the site/broad location assessment will consider whether there is a need for new infrastructure and environmental improvement or interventions to address the issue of multiple landowners.

### **Determining a development Trajectory**

- 6.53 Once the initial stages of the assessment had been undertaken and an assessment of deliverability and developability made, the housing potential of all sites will be used to produce an indicative housing trajectory, setting out how much housing could potentially be provided in the District and at what point in the future it is likely to be delivered. This will be set out within the Authority Monitoring Report which will also consider the District's performance on housing delivery against the Housing Delivery Test (HDT) introduced by the NPPF 2021.
- 6.54 The current AMR 2020/21 is unable to demonstrate a 5-year or 3-year housing land supply. The AMR publishes a 2.4 year housing land supply when measured against the Government's Standard Housing Methodology (i.e. Aruns 'local need figure'). Information about how Council is responding to the level housing land supply is set out in the AMR 2020/21 and 'Housing Delivery Test Action Plan' July 2021.
- 6.55 The Government published ADC's Delivery Test (HDT) results for November 2018 (91%); November 2019 (68%); and November 2020 (61%). The 2018 HDT result indicated that ADC needed to publish an Action Plan in order to identify barriers to housing delivery and measures to overcome them. The 2019 HDT result also triggered the need to apply a 20% buffer to the 5 year housing land calculation. The

under-performance for delivering housing is also signalled by the lack of a 5-year HLS. The Council published an Action Plan in 2019 which sets out an analysis of ADC's recent housing delivery performance and identifies issues and barriers and potential solutions to overcome these barriers. There were no updates to report in the Action Plan in 2020 however, the Council published an updated 'Housing Delivery Test Action Plan' July 2021.

- 6.56 As has already been stated, it is emphasised that the inclusion of a site within the assessment does not imply that that site will definitely be granted planning permission. The HELAA is a technical document used to identify a portfolio of housing sites which may be picked for future planning purposes. However, the final decision as to whether a site should be granted permission would be decided through the planning application process.

### **Stage 3: Windfall Assessment**

- 6.57 The guidance identifies that a windfall allowance (Sites not specifically identified in the development plan) may be justified in the 5-year supply if a Local Planning Authority has compelling evidence as set out in paragraph 71 of the NPPF 2021.
- 6.58 A windfall allowance will therefore continue to be included within future Housing Land Supply (HLS) trajectories, but this will now be reported within the Authorities Monitoring Report (AMR) rather than in the HELAA itself. It should be noted that Arun District together with other Districts within West Sussex together with the County Council, apply a windfall definition with a size threshold of 6 or fewer dwelling units for monitoring purposes. Some allowances will need to be made in the monitoring framework for delivery of some sites which fall within the windfall size threshold via the Non-Strategic Sites Development Plan Document and Neighbourhood Plans being prepared because such sites may be more sustainable and appropriate as deliverable allocations in Parish communities. NPPF 2021 para 69 a) also emphasises the need to deliver smaller sites as a proportion of housing needs (i.e. at least 10% of the housing requirement to be accommodated on smaller

sites no larger than one hectare - unless there is clear evidence that 10% is not achievable).

#### **Stage 4: Assessment Review**

- 6.59 Following the full site assessment, the development potential of all sites will be collated to produce an updated indicative housing trajectory to accompany the Authorities Monitoring Report. This will set out how much housing and the amount of economic development that can be provided, and at what point in the future.
- 6.60 A risk assessment will be included which sets out whether sites will come forward as anticipated. If it is identified that there are not sufficient sites to meet the adopted housing target and stepped trajectory or to improve the HDT result/performance, the HELAA assessments will need to be reviewed again to identify whether there are any potential development assumptions that can be amended. Contingency arrangements will need to be identified where it is not possible to identify sufficient suitable, achievable and available sites to meet the above housing requirement. The published 'Housing Delivery test Action Plan' July 2021 response to the HDT considers some of these potential interventions and contingencies.

#### **Stage 5: Final Assessment**

- 6.61 The core outputs from the HELAA shall be:
- List of all sites or broad locations considered, cross-referenced with a National Land and Property Gazetteer number to locations on maps;
  - An assessment of each site or broad location, in terms of its suitability for development, availability and achievability including whether the site/broad location is viable) to determine whether a site is realistically expected to be developed and when;
  - Contain more detail for sites which are considered to be realistic candidates for development, where others have been discounted for clearly evidenced

and justified reasons; the potential type and quantity of development that could be delivered on each site/broad location, including a reasonable estimate of build out rates, setting out how any barriers to delivery could be overcome and when; and

- provision of an evidence base for calculating an indicative trajectory of anticipated development over the ALP 2018 plan period to 2031 and consideration of associated risks to be set out in a subsequent Authorities Monitoring Report.

## **7. Site Assessment**

- 7.1 This chapter sets out the results of the HELAA in summary format. Detailed site assessments are contained within individual pro-forma contained within the appendices to this report, or via the interactive map found on the Arun District Council website (<https://www.arun.gov.uk/helaa-brownfield-land-self-build-registers>).

### **Deliverable, Developable and Not Currently Developable sites**

- 7.2 The determination of a site's suitability, availability and achievability combined with timeframe for development directly informs the overall site assessment as either:
- Deliverable,
  - Developable, or
  - Not-currently developable.
- 7.3 Annex 2: Glossary, of the NPPF 2021 which explains the requirements for a site to be considered deliverable" (see section 6.35- 6.38 above for extract of the material definitions .
- 7.4 It continues by explaining that for a site to be considered developable (see section 6.35- 6.38 above for extract of the material definitions).
- 7.5 In order to ensure that the HELAA abides by the above guidance, sites classified as suitable, available and achievable sites are assessed as either being deliverable or developable. This is explained in the sub-headings within this section.

### **New HELAA sites**

- 7.6 New sites can be submitted to the HELAA at any point through the site submission form which is available on the HELAA webpage although a call for sites is issued each year in May/June. The administrative cut-off date for this year's HELAA,

however was the middle of August. The majority of new sites have been received as formal site submissions through the call for sites exercise. There were also a number of sites sourced from sites coming through the planning process.

- 7.7 With all new sites, relevant supplementary information provided by individuals, promoters and organisations on specific sites or wider known constraints which would impact upon the assessment of sites, were fed into the update.
- 7.8 19 new sites were assessed or included as part of the 2021 update, of which 3 were concluded to be deliverable (suitable, available and achievable), 3 sites were developable and the remaining 12 sites were found to be not deliverable or developable due to suitability, availability or achievability reasons and 1 site is assessed as a potential new employment site. (See Appendix 7.1)

### **Amendments to existing assessed housing sites**

- 7.9 The HELAA is a 'living' document which allows for the conclusions on existing sites to be reconsidered in light of new or updated information submitted to, or acquired by, the Council from site promoters or relevant stakeholders. This information may be a factual update on the recent progress of a site with extant planning permission or reflect additional work undertaken by promoters of a site to resolve previously identified constraints. Addenda are also sometimes necessary to correct errors or omissions.
- 7.10 The dwelling capacities/ site changes on sites with extant planning permission have been amended to reflect any starts or completions in the last year.

### **Deliverable Sites**

- 7.11 For the purposes of this report, we have classified sites that have been assessed to be suitable, available and achievable to be deliverable. Deliverable sites have three sub-categories: Deliverable (general), Deliverable (Neighbourhood Plan) and Deliverable (Strategic).

- 7.12 In summary, 23 sites were considered to be deliverable (general), providing a potential capacity of 2,711 dwellings. All sites considered to be deliverable are contained within Appendix 1, in the form of a proforma.

### **Developable Sites**

- 7.13 For the purposes of this report, we have classified sites as being developable if they are either suitable, available and achievable sites, but specific information suggests that development could not come forward within 5 years;
- 7.14 In summary, 34 sites were considered to be developable (general), bringing a potential capacity to deliver 3,556 dwellings. All sites considered to be developable are contained within Appendix 2, in the form of a proforma.

### **Not Currently Developable**

- 7.15 A site is not currently developable where the prospect of development is unlikely as it does not meet all three criteria of being suitable, available and achievable. As such, there are multiple reasons as to why a site would be considered non-developable.
- 7.16 All 233 sites considered to be not developable are contained within Appendix 3, in the form of a proforma.

### **Employment Sites**

- 7.17 A site is considered a Potential Employment Site in the HELAA where the proposed use is for Business and Industrial (Use Classes B1, B2 & B8) and will yield at least 500sqm of new floorspace. There has also been an additional category Use Class E: Commercial, Business and Service introduced in September 2020 that is monitored in the AMR.

**Employment Sites are classified in the HELAA as follows:**

- 7.18 **Potential Employment Site:** to be considered 'a potential employment site it should be available now, offer a suitable location for development, and be achievable with a realistic prospect that a business use will be delivered on the site within five years. Sites that have been identified as a potential employment site but do not currently have permission are included if they have been recently promoted. Potential Employment sites are coloured YELLOW on the HELAA map.
- 7.19 There was 1 new Potential Employment sites submitted under the call for sites consultation in 2021. For further details on available and completed floor space (source: CILLA data provided by West Sussex County Council) please see Chapter 6 of the Authority Monitoring Report 2020/21.

## Final HELAA figures

### LPA Area Assessment

7.20 The table below (table 2) summarises the above information by both the number of sites assessed and potential dwelling yield for the LPA area. The figures reflect any changes in capacity made in the assessment of the site.

<b>Deliverable sites**</b>		<b>Developable sites**</b>		<b>Not Currently Developable</b>		<b>Total general sites (Deliverable and Developable)</b>	
No. of sites	Dwelling Yield	No. of sites	No. of sites	No. of sites	Dwelling Yield	No. of sites	Dwelling Yield
23	2,711	34	3,556	233	*N/A	57	6,267

Table 2: Final HELAA figures.

\*Please note that sites classed as not developable are not allocated a capacity

\*\* Please also note that these total figures are not including strategic allocations within the ALP 2018 and sites within Made Neighbourhood Plans.

Strategic sites are additional to these figures.

### Permitted/Commitment sites

7.21 For this update an additional summary table has been produced which extracts those sites with extant planning permission/commitments (for Residential, Employment and C2 use) (see Appendix 5). Whilst permitted sites are a key source of sites for the purposes of the HELAA, they should not be counted towards the final HELAA totals. A total of 126 sites have been identified as commitment sites.

## 8. Windfall Assessment

### Background

- 8.1 The NPPF 2021 identifies windfall sites as ‘sites not specifically identified in the development plan.’
- 8.2 Paragraph 71 of the NPPF 2021 states that *“Where an allowance is to be made for windfall sites as part of anticipated supply, there should be compelling evidence that they will provide a reliable source of supply. Any allowance should be realistic having regard to the strategic housing land availability assessment, historic windfall delivery rates and expected future trends.”*
- 8.3 Historically, a significant contribution to the housing supply has come from residential garden land; however the Government has said that *“Plans should consider the case for setting out policies to resist inappropriate development of residential gardens, for example where development would cause harm to the local area”* (NPPF 2021 para 71). On this basis the supply from such developments is likely to diminish although in some cases such developments may be appropriate if there is no harm to the local area.

### Approach

- 8.4 The housing supply for the Arun Local Plan period includes a windfall allowance, reflecting the contribution to be made by ‘windfall’ sites to the housing supply. This is based on monitoring data. The Council’s view is therefore, that the delivery of unidentified small sites in the district has been, and will continue to be, an integral source of housing supply, and therefore the HELAA will assist in providing information in order for a calculation of potential future housing delivery through windfall sites to be made and set out in the Authorities Monitoring Report.
- 8.5 It should be noted that Arun District together with other Districts within West Sussex together with the County Council, apply a windfall definition with a size threshold of 6 or fewer dwelling units for monitoring purposes. Some allowances

will need to be made in the monitoring framework for delivery of some sites which fall within the windfall size threshold via the Neighbourhood Plans being prepared because such sites may be more sustainable and appropriate as deliverable allocations in Parish communities (the NPPF 2021 also emphasises the need to deliver smaller sites as a proportion of housing needs i.e. at least 10%).

## 9. Final Assessment/Conclusions

### Summary

- 9.1 This section of the report summarises the main findings of the HELAA and indicates how the findings will be used as part of the preparation plan making e.g. Local Plan update, as well as NPs.

### Planning Practice Guidance

- 9.2 The Planning Practice Guidance identifies a number of core outputs from the HELAA. These are highlighted with PPG reference points within the HELAA.
- 9.3 PPG: A list of all sites or broad locations considered should be prepared, cross-referenced with a National Land and Property Gazetteer (NLPG) number to locations on maps.
- 9.4 *HELAA Output:* All of the sites contained within the Council's HELAA have been identified and provided with their reference number. This has helped the authority to link the site to the planning applications database which enables a clearer picture of a sites individual planning history to be identified and understood. This is particularly helpful when undertaking future reviews of the HELAA. This is visible within the HELAA database of sites.
- 9.5 PPG: An assessment of each site or broad location, in terms of its suitability for development, availability and achievability including whether the site/broad location is viable) to determine whether a site is realistically expected to be developed and when.
- 9.6 *HELAA Output:* This information is contained within the Council's HELAA database. This has been based on information available to the Council including individual submissions received from site owners or promoters. The results of which have also been incorporated into individual site pro-forma. The site pro-forma's are contained

within the appendices to this report along with an interactive map which is contained on the Arun District Council website ([www.arun.gov.uk](http://www.arun.gov.uk)).

- 9.7 PPG: Contain more detail for sites which are considered to be realistic candidates for development, where others have been discounted for clearly evidenced and justified reasons; the potential type and quantity of development that could be delivered on each site/broad location, including a reasonable estimate of build out rates, setting out how any barriers to delivery could be overcome and when.

### **Overall Supply of Deliverable and Developable Sites**

- 9.9 23 sites were considered to be deliverable, with capacity for 2,711 dwellings on those sites. A total of 34 sites were found to be developable, capable of bringing forward 3,556 dwellings.

### **Housing Trajectory**

- 9.10 Using the information collected on sites assessed as being deliverable and developable, we will be able to produce a housing trajectory for the period 2011-2031. This trajectory is included within the Housing Land Supply alongside the AMR, and published separately.

### **How the Findings will be used**

- 9.11 The findings of the HELAA will be used alongside other evidence base documents, to inform the production of any Development Plan Documents by helping to identify development options for consideration and assessment.
- 9.12 It is important to remember that the classifying of a site as suitable in the HELAA does not grant a site planning permission and is not an allocation. Only a Development Plan Document or Neighbourhood Plan can allocate land for development. It should also be noted that for a site to proceed for allocation or planning permission SFRA and 100 year climate change contour will need to be

considered with regard to sequential and exceptions test which may affect housing yields.

## Future Updates

- 9.13 The HELAA is a process that is to be repeated on an annual basis. As such, this HELAA report will be revised to take into account additional information submitted to the Council. It will reassess sites based on this additional information and will assess any further sites submitted at the same time. In the light of paragraph 2.37 above, the 'call of sites' proforma will be amended as part of the preparation for the next HELAA review (2022) to include a 'delivery certificate'. Promoters/developers will be invited to sign the certificate (showing the housing trajectory) as evidence demonstrating their commitment to adhering to the trajectory timescales set out in their supplied proforma. National policy and guidance requires authorities to proactively seek such delivery evidence, such that confidence can be had on the delivery status of sites to be included in the HELAA and subsequent 5 year housing land supply calculation.
- 9.14 The estimated windfall delivery rate will be recalculated to take into account recent completions and a reassessment of market conditions and published within the AMR.

## APPENDICES

The appendices contain detailed site assessments in the form of individual proforma according to the status of the site. Please note that the appendices are ordered by parish. The appendices are ordered as follows:

### **Appendix 1                      Deliverable Sites**

Appendix 1.1	Deliverable Sites - Summary Tables
Appendix 1.2	Deliverable Sites (excluding Neighbourhood Plan Sites) - Detailed Proforma
Appendix 1.3	Deliverable Sites (Neighbourhood Plan Sites) - Detailed Proforma
Appendix 1.4	Deliverable Strategic Allocation Sites – Detailed Proforma

### **Appendix 2                      Developable Sites**

Appendix 2.1	Developable Sites - Summary Tables
Appendix 2.2	Developable Sites (excluding Neighbourhood Plan Sites) - Detailed Proforma
Appendix 2.3	Developable Sites (Neighbourhood Plan Sites) - Detailed Proforma

### **Appendix 3                      Not-Developable Sites**

Appendix 3.1	Not-Developable Sites - Summary Table
Appendix 3.2	Not-Developable Sites - Detailed Proforma

### **Appendix 4                      Employment Sites**

Appendix 4.1	Employment Sites - Potential Employment Sites Summary Table
Appendix 4.2	Employment Sites - Potential Employment Sites - Detailed Proforma

### **Appendix 5                      Commitments**

Appendix 5.1	Commitments – Summary Table
--------------	-----------------------------

### **Appendix 6                      Potential C2 Use**

Appendix 6.1	Potential C2 Use HELAA Sites – Summary Table
--------------	--

## **Appendix 7                New Sites 2021**

### **Appendix 7.1            New Sites 2021 Summary Table**

## **Appendix 8. Decision Tree for 2021 HELAA**

### **Proforma**

The Proforma contains the following information:

- HELAA Site Reference
- National Land and Property Gazetteer number
- Site address
- Site area
- An assessment of each site in terms of its suitability for development, availability and achievability
- A decision as to whether the site has been assessed as deliverable, developable or not developable

Sites considered to be either deliverable or developable also contain the following information:

- The potential type and quantity of development that could be delivered
- A reasonable estimate of build out rates;
- An indication of the timescale for delivery

### **Interactive HELAA Map**

Alternatively, the proforma can be obtained via the interactive map found on the Arun District Council website (<https://www.arun.gov.uk/helaa-brownfield-land-self-build-registers>). The map provides an easy to use system for identifying a specific site within the assessment area. This is particularly helpful if you wish to identify a specific site or sites within a parish or settlement.

## APPENDIX 1 – DELIVERABLE SITES

### APPENDIX 1.1 – DELIVERABLE SITES

#### SUMMARY TABLES

#### DELIVERABLE SITES (EXCLUDING NEIGHBOURHOOD PLAN, LOCAL PLAN ALLOCATIONS & COMMITMENTS)

HELAA Ref	Address	Parish	Viability Yield
113A	Land West of Westergate Street (Woodgate Nursery)	Aldingbourne	621
20AL4	Land at Woodgate Nurseries Lidsey Road	Aldingbourne	109
20AL2	Land west of Lidsey Road (Woodgate Nursery) Aldingbourne	Aldingbourne	111
21AL3	SRC Recycling, Fontwell Avenue Eastergate, Chichester	Aldingbourne	90
20A1	Avenals Barn Water Lane	Angmering	30
38	Wilmington, Arundel Road	Angmering	40
19A1	Land at Rustington Golf Centre Golfers Lane	Angmering	106
19BA1	Land south of Lake Lane, Barnham	Barnham & Eastergate	46
BA12A	Land west of Church Lane (Rear of Cottage Piggeries)	Barnham & Eastergate	241
103	Land to the North of Lake Lane, West Hightrees	Barnham & Eastergate	71
116A	Pollards Nursery, Lake Lane (Also known as Eric Wall Nursery)	Barnham & Eastergate	6
BR23911	The Beach The Esplanade	Bognor Regis	33
NEWBR1	Land adjoining Gordon Avenue West	Bognor Regis	11
110	Land east of Green Park Ferring	Ferring	56
18F2	Land to the south of Ford Lane and east of King George V rec Yapton	Ford	294
LU12B	Land North of Littlehampton Academy West of Oakcroft Gardens	Littlehampton	80
FP17	Land to south of A259	Middleton	189
R7	Rustington House, Cowdray Drive	Rustington	25
78	Clock House and Surrounding Area	Rustington	13
99	Land at Barnfield House, Arundel Road, Fontwell	Walberton	22
17Y3	Land at Junction of Ford Lane and North End Road	Yapton	9
18Y3	Land to the south of Ford Lane Yapton	Yapton	301
18Y2	Lambs Field Bilsham Road	Yapton	207
		<b>TOTAL</b>	<b>2711</b>

**DELIVERABLE NEIGHBOURHOOD PLAN ALLOCATIONS (not including 2021 RLA Commitments)**

<b>HELAA Ref</b>	<b>Address</b>	<b>Parish</b>	<b>Viability Yield</b>
A1513	Chandlers BMW Site, Water Lane	Angmering	20
EG7114OUT	Land North of Barnham Road (East of Collins Close) (Former Eastergate Fruit Farm)	Barnham & Eastergate	115
BE113	Land adjacent to Tesco Express (Former site of The Rising Sun) 351 Chichester Road	Bersted	5
LU5515OUT	Land South of Littlehampton Academy Littlehampton	Littlehampton	70
NEWLU40	Former Hospital Site, Fitzalan Road/Church Street	Littlehampton	15
LU12	North of the Littlehampton Academy South of Cornfield Close	Littlehampton	138
FON3	Land to West of A27	Walberton	40
		<b>TOTAL</b>	<b>403</b>

**DELIVERABLE STRATEGIC ALLOCATION HELAA SITES (not including 2021 RLA commitments)**

<b>HELAA Ref</b>	<b>Address</b>	<b>Parish</b>	<b>Viability Yield</b>
WE4	Land East of Westergate Street (Part of SD5)	Aldingbourne	350
WE6	Ryefield Farm & Woodgate Centre, Oaktree Lane (Part of SD5)	Aldingbourne	160

HELAA Ref	Address	Status	Parish
21AL3	SRC Recycling, Fontwell Avenue Eastergate, Chichester	Deliverable	Aldingbourne
NEWA13A	Worthing Rugby Club, Roundstone Lane Angmering (SD11)	Deliverable	Angmering
BN15320	Warwick Nursery, Barnham Road (Part of SD5)	Deliverable	Barnham & Eastergate
21A2	Oak Tree Farm Dappers Lane Angmering	Developable	Angmering
21WA3	Gracelands Farm, Arundel Road, Walberton	Developable	Walberton
21Y1	Glebelands Farm, Yapton Road	Developable	Yapton
21AL4	Woodpecker Nursery, Sack lane, Lidsey Bognor Regis	Not Cur Developable	Aldingbourne
21AL1	Norton Grange Farm Aldingbourne	Not Cur Developable	Aldingbourne
21A1	Acorns, Arundel Road Angmering	Not Cur Developable	Angmering
21BN1	Eastmere Stables, Eastergate Lane	Not Cur Developable	Barnham & Eastergate
21BN2	Eastmere Storage, Eastergate Lane	Not Cur Developable	Barnham & Eastergate
21BN3	Land at Wandleys Lane, Eastergate	Not Cur Developable	Barnham & Eastergate
21LH2	Littlehampton Gas Holder Site Harwood Road / Gloucester Road	Not Cur Developable	Littlehampton
21LH1	Brook Barn Farm, Courtwick	Not Cur Developable	Littlehampton
94A	Sunny Corner, Copse Lane Walberton	Not Cur Developable	Walberton
21WA1	Land at Hooe Farm Tye Lane	Not Cur Developable	Walberton
21WA2	Land to the Rear of The Pines West Walberton Lane	Not Cur Developable	Walberton
21Y2	Land to the rear of Glebelands Farm Yapton Road	Not Cur Developable	Yapton
21LY1	Land east of A284, Lymnister	Potential Employ Site	Lymminster

## Appendix 8: Decision Tree for 2020 HELAA

Status	Within BUAB	Outside but Physically Adjacent to BUAB	Walking proximity to BUAB (400 m)	Other settlement configuration mitigation	Remote from BUAB
Suitability					
NPPF Designation?	Not Suitable	Not Suitable	Not Suitable	Not Suitable	Not Suitable
<b>Local Plan Policy Designations</b>					
Gaps Between Settlements	NA	Suitable	Suitable	Suitable	Not Suitable
Large site compromises gap	NA	Not Suitable	Not Suitable	Not Suitable	Not Suitable
Small or modest site *	NA	Suitable	Suitable	Suitable	Not Suitable
Setting of Arundel	Suitable	Suitable	Not Suitable	Not Suitable	Not Suitable
Not within policy named locations*					
Sites of National Importance for Nature Conservation*	Not Suitable	Not Suitable	Not Suitable	Not Suitable	Not Suitable
Sites of Nature conservation Importance*	Not Suitable	Not Suitable	Not Suitable	Not Suitable	Not Suitable
Local Nature Reserve	Not Suitable	Not Suitable	Not Suitable	Not Suitable	Not Suitable
Biodiversity Opportunity Area*	Suitable	Suitable	Suitable	Suitable	Not Suitable
Warf or Roadstone Plant	Not Suitable	Not Suitable	Not Suitable	Not Suitable	Not Suitable
Sharp Sand Minerals Safeguarding Area – if significant i.e. >0.5 ha may not be suitable	Suitable	Suitable	Suitable	Suitable	Not Suitable
Strategic Waste Site	Not Suitable	Not Suitable	Not Suitable	Not Suitable	Not Suitable
Existing Open Space	Suitable	Suitable	Not Suitable	Not Suitable	Not Suitable
Local Green Space (in Neighbourhood Plans)	Not Suitable	Not Suitable	Not Suitable	Not Suitable	Not Suitable
Conservation Area	Not Suitable	Not Suitable	Not Suitable	Not Suitable	Not Suitable
Area of Character	Not Suitable	Not Suitable	Not Suitable	Not Suitable	Not Suitable

Scheduled Ancient Monument	Not Suitable	Not Suitable	Not Suitable	Not Suitable	Not Suitable
Pagham Harbour Buffer Zone A (400m)	Not Suitable	Not Suitable	Not Suitable	Not Suitable	Not Suitable
Pagham Harbour buffer Zone B (5 km)	Suitable	Suitable	Suitable	Suitable	Not Suitable
<b>Made Neighbourhood Plan constraint/emerging NP may be considered</b>					
Local Gap	NA	Not Suitable	Not Suitable	Not Suitable	Not Suitable
<b>100 year (40%) Climate Change</b>					
100% of footprint	Not Suitable	Not Suitable	Not Suitable	Not Suitable	Not Suitable
50% of footprint	Suitable	Suitable	Suitable	Not Suitable	Not Suitable
10% of footprint	Suitable	Suitable	Suitable	Suitable	NCD
Island effect?	Suitable	Suitable	Not Suitable	Not Suitable	Not Suitable
<b>Availability</b>					
Currently Promoted 2020 (If viable and 5 yr evidence)	DEL	DEL	DEL	DEL	NCD
Promoted 2020	DEV	DEV	DEV	DEV	NCD
Promoted other	DEV (no constraints)	DEV (no constraints)	DEV (no constraints)	DEV (no constraints)	NCD
<b>Achievability</b>					
Viable Density and Yield	Suitable	Suitable	Suitable	Suitable	Not Suitable
Trajectory/evidence within 5 years (if promoted 2020)	DEL	DEL	DEL	DEL	Not Suitable
Trajectory promoted other	DEV	DEV	DEV	DEV	

- **Note:** the above decision tree is used by officers as a guide to looking at suitability and site status at a high level. Not all designations are listed but other key environmental constraints may be material to a specific assessment e.g. impact on Ancient Woodland etc. However, it is not the purpose or an appropriate methodology for the high level HELAA to consider all policies of the development plan (which includes Neighbourhood Plans). The application of one constraint on its own may also not necessarily determine the assessment outcome but may be tempered by consideration of other material constraints, context and mitigation. The degree of fit with settlement pattern for example may refer to the countryside and wider landscape considerations including, sensitive settlement character and heritage etc.
