Dear Christopher

Report on the Mature English Oak Tree to the south of your Property bordering Wandleys Lane

Further to my visit, I provide the following findings with reference to the above tree.

Description

T1 : Medium sized but Mature English Oak in average condition. The trees canopy shows little sign of vigour. The previous seasons growth was quite stunted. Due to the canopy not looking too vibrant, I would recommend minimal pruning works. The tree has over the years pushed out towards the north in the direction of your property. It also supports low spreading limbs which grow out towards the garage/ west There is minimal dead wood within this tree's canopy.

Works Recommended

I recommend that tipping back lateral growth towards your house by approximately 2 Meters may help let light into your garden and also hopefully stimulate new growth on the Oak. I also recommend a very light crown lift on the west side (approx. 0.5 of a Meter) and pruning back the westerly lateral spread by 1 Meter. I do not recommend reducing the trees height.

The above has been recommended on grounds of maintaining a balance with the tree and your garden. I also hope it helps to stimulate new growth. If you require more details they will gladly be provided.
