

Tree A: Willow Tree

30% Crown Reduction

Having talked to our tree surgeon, she has recommended a 30% crown reduction on our Willow tree. At the moment it is blocking out a lot of sun light and its branches are almost overhanging our outhouse as you will see in the pictures below. The Willow tree canopy has grown into the neighbouring Walnut tree canopy blocking out a substantial amount of sunlight.

TREE B: Walnut Tree

Our tree surgeon has recommended a 30% crown reduction on our Walnut Tree and a 1.5m lift. As you will see from the pictures below its lower branches are nearly overhanging our outhouse and hang low over our drive.

The Walnut Tree is also blocking out a lot of light from our garden and has grown into the Willow canopy.

Tree C: Weeping Willow

Our tree surgeon has recommended a 35% crown reduction and a 1m lift on our Weeping Willow tree.

The tree is on the border of our property and hangs over Church Lane which is used by a number of agricultural vehicles. Please see the image below.

This tree is also blocking sunlight from our garden.
