

NOTE: The Survey has been oriented to the U.S. National Grid (OSGB36) via a Global Position System and the U.S. Active Network (OS Net) OSGB36. The OSGB36 coordinates have been established at a point near to create a further OSGB36 point established to create a true U.S. bearing for angle orientational levels are based on OSGB36. The U.S. National Grid is not the same as the true U.S. Coordinate System which would require scale factors to be applied to all distances. The Survey Station label should be used to establish any on-site coordinates.

400/7/8 bole dia(mm)/spread(m)/height(m)  
Tree species should be checked by an expert if identification is critical.  
Trees show overage spread unless otherwise shown.  
Tree heights are by visual estimation and are not measured

A diagram showing two overlapping rectangles. The rectangle on the left is labeled '20' and is outlined in red. The rectangle on the right is labeled '21' and is outlined in black. The two rectangles overlap, with the intersection area shaded in light blue. The entire diagram is enclosed in a light gray border.
