Dear Mr. Holman,

Mature Field Maple.

Further to my visit on Saturday last concerning the condition of the field maple standing at the front of your property.

Casual inspection revealed that there are several cavities in the bole of the tree and that one, at about 4m, is of a size which has seen the decay of most of the supporting wood. Daylight can be seen through the bole at this point. I consider this tree to be in a hazardous condition and recommend that, particularly in view of the public footpath beneath the tree, it is felled within the next three months.

Yours sincerely,

Stuart Power.
