Dear Sarah and Anita,

I have spoken to Sarah directly about this, and my comments are below:

Technically, the information that has been submitted is fine and Environmental Health would be happy to discharge this condition. However, the wording of the condition was put on the planning permission by the Planning Inspector and is slightly different to the wording that we would normally ask for. Therefore I have asked Sarah to submit the following information as a gesture of goodwill:

- Measures to minimise noise (including vibration), including proposed method of piling, careful selection of plant/machinery, any noise mitigation measures
- Measures to control any sources of floodlighting, light sources including intensity of illumination to be used
- Measures to control emissions of dust/dirt during construction (I realise the CMP includes wheel washing already, looking for damping down, covering stockpiles etc.)

Many thanks

Fiona
