Good morning Euan,

Please find attached information revised to ADC's 1No comment below.

I don't know why they prefer granular to concrete surround for inspection chambers – seemed simpler just to change the detail rather than question this.

Kind regards

Engineers Comments Regarding Surface Water Drainage

Condition 10

1. The trial pit TP01 is undersized (0.3m x 0.3m rather than 0.3m x 1m specified by BRE365). Please apply a safety factor of 3 to the calculations. Three tests were completed, the date of testing is assumed to be 24/01/2018 (from the test pit stratum record) however this is not clear. Please clarify. Done. Date confirmed and factor of safety has been applied.
2. Construction detail drawings need to be included for:
 - a. Inspection chambers Done, but requires a concrete collar and a granular surround.
 - b. Channel drains Done
 - c. Pipe bed and surround Done

Condition 11

It would be helpful if it was clear in the Introduction/Maintenance Responsibilities that the permeable paving drains the proposed building as well as the driveway itself. Done

Updated plans/construction details (to discharge condition 10) will need to be included. Plan included, if possible please also add the construction details once the inspection chamber has been amended.

Kind Regards
